KEY POINTS

1. Apple's Worldwide Developers Conference 2019 starts June 3.
2. It's where Apple announces new software for iPhones, iPads, Macs, Apple TVs, Apple Watches and more.
3. Bloomberg on Monday outlined some of the features it says are coming to the new version of iOS.

[Apple](#) will announce new software features coming to iPhones, iPads, Macs, Apple TVs and Apple Watches on June 3, to kick off its annual Worldwide Developers

Conference (WWDC). [Bloomberg](#) on Monday highlighted a couple features that it says are coming to those platforms.

Software changes to iOS 13, reportedly named “Yukon,” are unlikely to be drastic enough to [flip falling iPhone sales](#), but they may refine the experience for Apple’s current customers. They could also be used to push the new digital services Apple recently announced, like a video game subscription service and streaming TV shows produced by Apple.

Bloomberg reported Apple is planning to add a new “dark mode” to iOS 13, a feature that’s already available for Macs that darkens different parts of the user interface so it’s less harsh on eyes, particularly in the evening.

The company is also reportedly planning a new feature that will allow people to use iPads as a secondary display when connected to a Mac. Other features include new multitasking for iPads, tweaks to iMessage that make it more like WhatsApp and a new Health app that “better outlines your daily activity from the day,” Bloomberg reported.

Apple’s iOS has improved steadily over the years, with recent releases focused on improving battery life and performance on older devices. The company’s voice assistant Siri could use a big upgrade, but major changes to it weren’t mentioned in the report. Since Apple always

rolls out new features to older iPhones and iPads
however, iOS upgrades don't usually drive new device
sales.
