Customize the Lock Screen

Apple has had a radical departure in iOS 16 from its traditional stance on controlling the entire iOS environment. Now you can do SOME customizing of your lock screen. You are given 3 areas that you are able change on the iPhone face. This is still somewhat limited, but there will probably be more options as time goes by. This is compatible with every iPhone released in 2017 and later: the iPhone 8, X, XS, 11, 12, 13 and 14 models and iPhone SE (both second and third generation).

STEP 1

To start, tap and hold on the Lock Screen, scroll to the right and tap **Add New**.

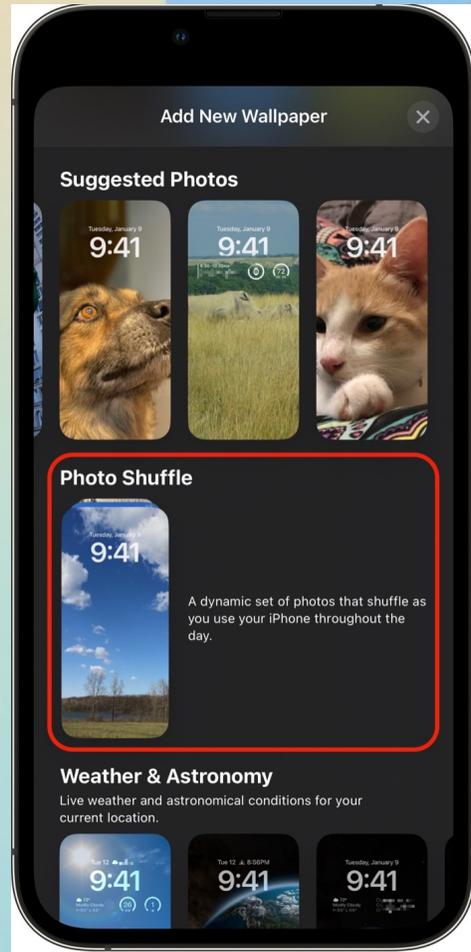

Then select one of the new background styles: Photos, Weather, Astronomy, or Emoji. You can set a single photo or intelligent photo picking. It will find the best shots in your library. If you tag people in Photos, it'll show more pictures of your close friends and family.

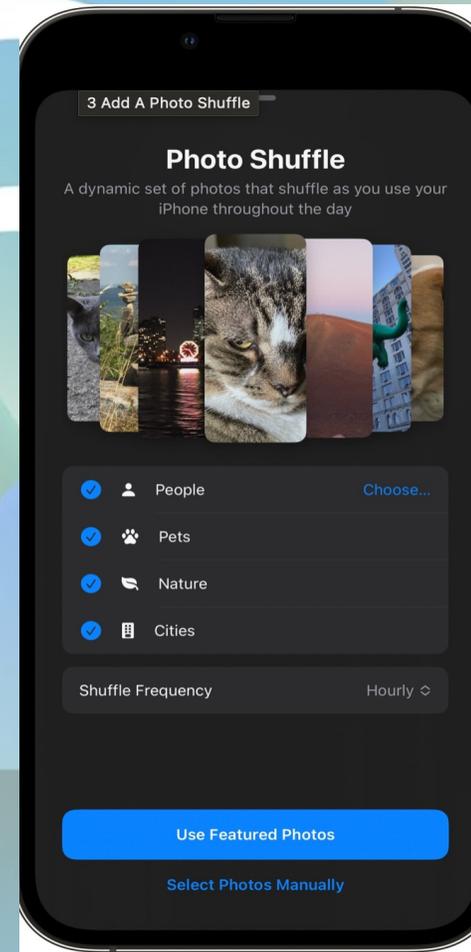

Customize the Lock Screen

Apple has had a radical departure in iOS 16 from its traditional stance on controlling the entire iOS environment. Now you can do SOME customizing of your lock screen. You are given 3 areas that you are able change on the iPhone face. This is still somewhat limited, but there will probably be more options as time goes by. This is compatible with every iPhone released in 2017 and later: the iPhone 8, X, XS, 11, 12, 13 and 14 models and iPhone SE (both second and third generation).

STEP 1

If you want photos, then Tap **Photos** on the top to pick a photo from your library. You also can tap **Photo Shuffle**. It will automatically pick photos from each category and rotate through them. Tap on a category to exclude it.

If you choose shuffle, Tap **People** to see photos of people your phone has picked for you. You also can switch to see **Pets, Nature and Cities**, or just tap **All** to see everything. Tap **Shuffle Frequency** to set when you want the background to change — every time you tap the screen, every time you open your phone, every hour or every day. Tap **Use Featured Photos** to add it or tap **Select Photos Manually** to pick a few out of your library. Be aware that photo shuffle can use more battery.

Customize the Lock Screen

STEP 1

How to add astronomy animations to your Lock Screen

If you prefer, you can use the astronomy wallpaper and you have five settings to choose from. **Earth** shows the whole globe, **Earth Detail** zooms a little closer into your geographic area, **Moon** shows the whole moon, **Moon Detail** zooms in on a similar part of the moon, and **Solar System** shows the relative position of all eight planets.

When you pick Earth or Moon, there's a cool animation as you swipe up to unlock your phone as the globe will zoom in to fill the bottom of the screen. It looks less dramatic if you pick Earth or Moon Detail.

Customize the Lock Screen

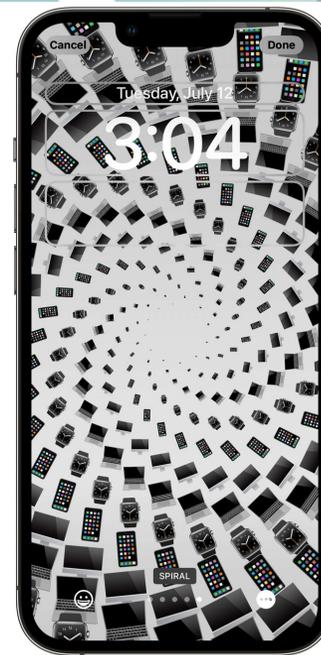

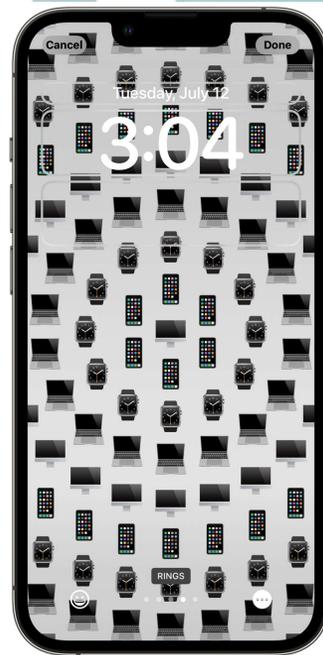

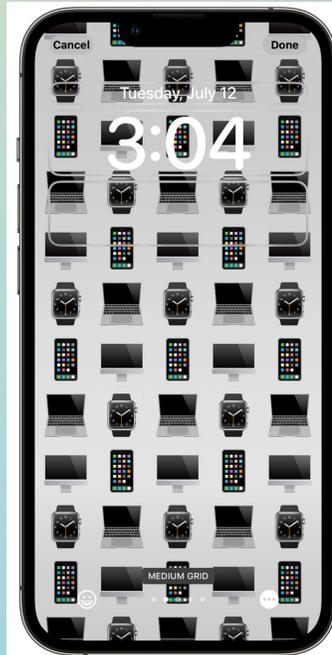

STEP 1

Use emojis as your background

Tap **Emoji** to create your own or pick one of the templates below to start. Tap the Emoji button in the bottom-left to pick up to six emoji.

You have five options for filling the screen with size and pattern: Small, Medium and Large Grid, Rings and Spiral.

Tap the menu button in the bottom right and tap Background to pick a background color.

Customize the Lock Screen

STEP 1

Set your background as a wallpaper or just a plain color

Tap the menu button in the bottom-right and tap **Background** to pick a background color. You can use featured backgrounds, classic backgrounds, or pick your own color.

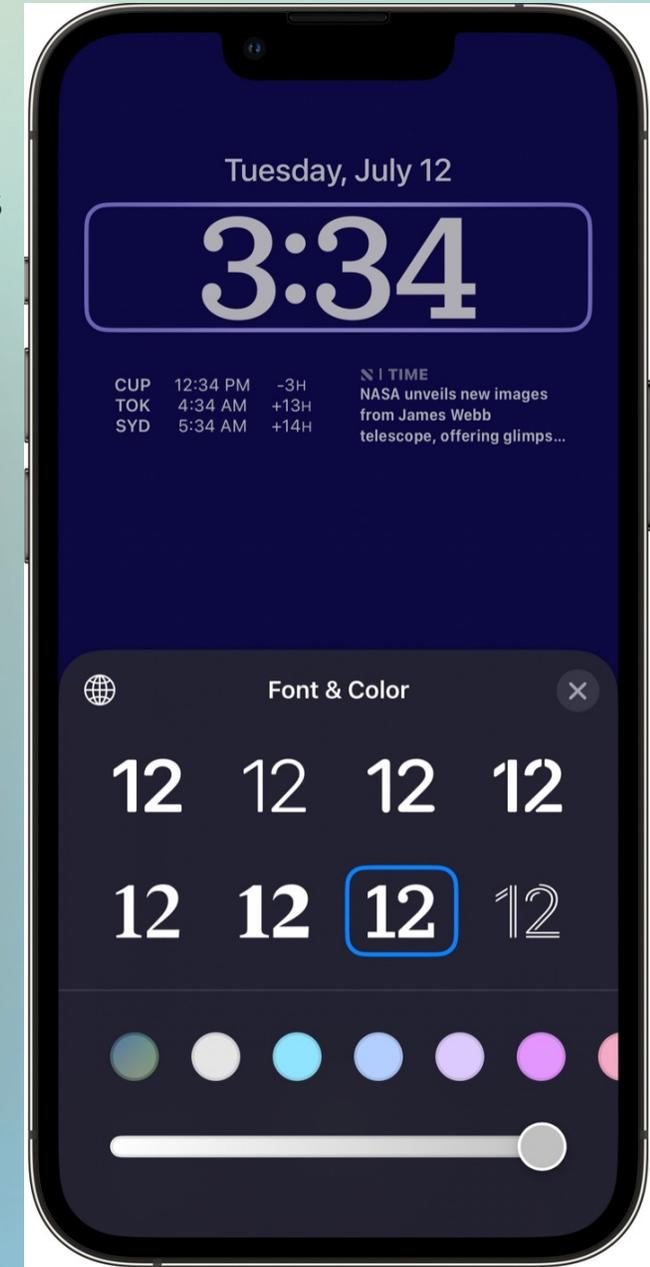

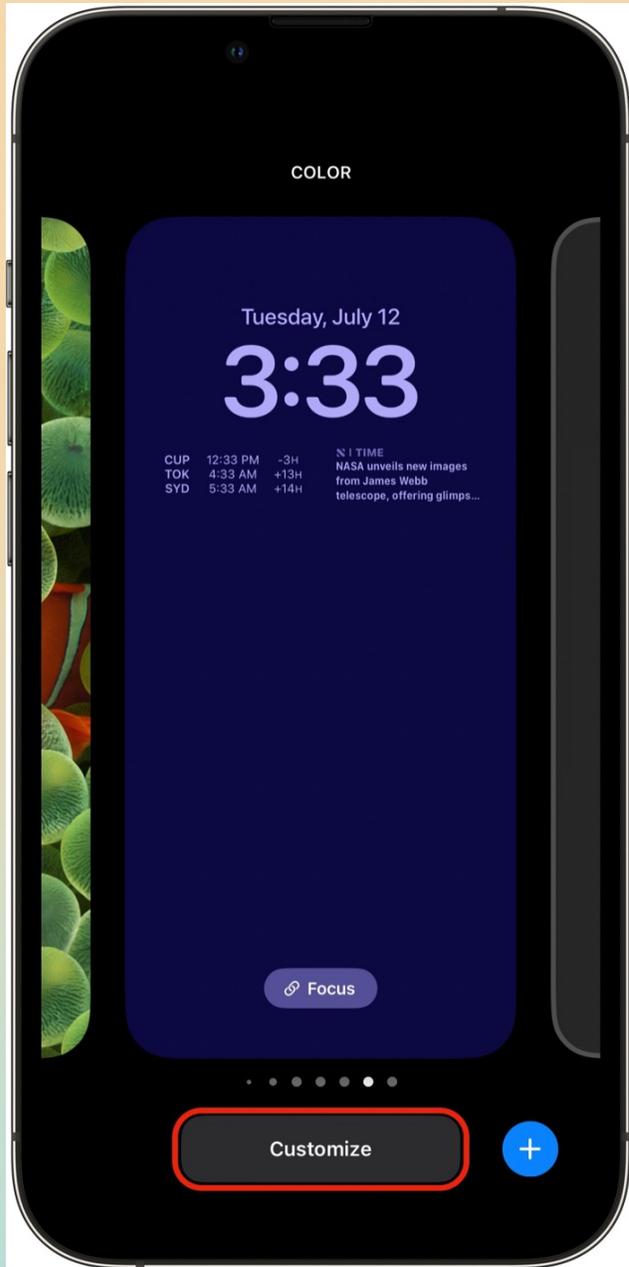

Customize the Lock Screen

STEP 2

How to change the Lock Screen's fonts, widgets, and colors

Tap and hold on the Lock Screen to enter customize mode. Then tap **Customize** at the bottom

Next tap on one of the three customizable fields that you want to work on. I would start by tapping on the time field to change the font and text color to the style you want. You might have to play with the color a few times to get it right, as you have to figure out what works with your background.

Customize the Lock Screen

STEP 2

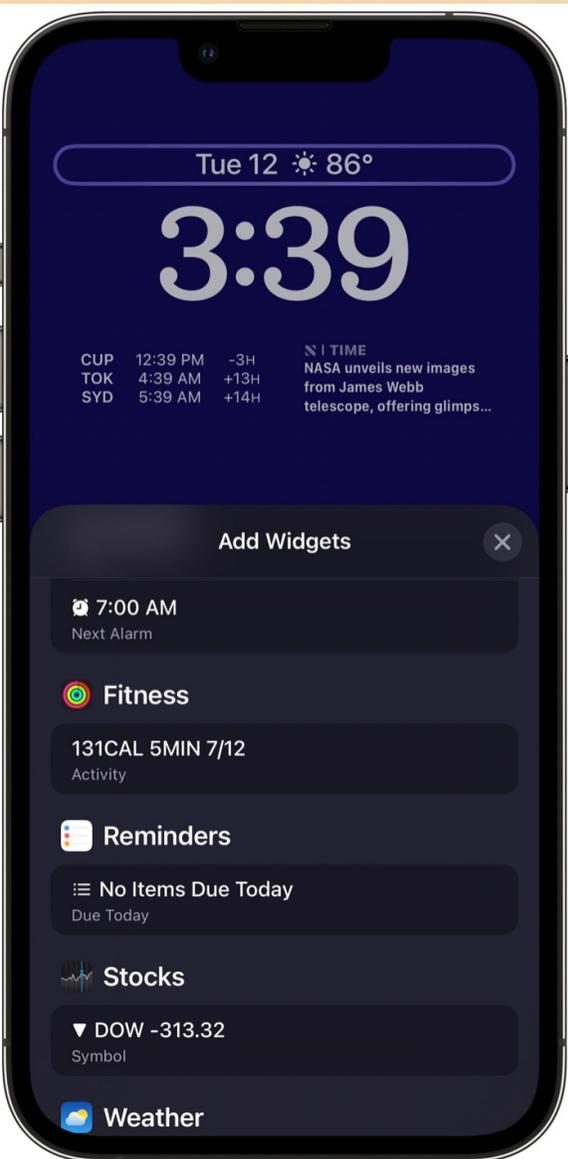

How to change the Lock Screen's fonts, widgets, and colors

Tap on the text above the clock to pick a widget. Any widget you pick will appear as a single line of text next to the date. If you don't want a widget here, pick the first Calendar widget and the date will fill the whole spot.

Tap the widgets below the clock to pick up to 3 widgets. It should come with default widgets in this spot. Just Tap the minus on the widget to get rid of it. Then pick widget from the options below. Your phone will give you the preset widgets plus ones that are offered by third-party apps. You are given different size options for widgets. If you pick wider widgets, you may be limited to 2 instead of 3 widgets in this space.

Some widgets have additional settings if you tap on them: Reminders lets you pick a list, Clock lets you pick a city, Batteries lets you pick a device, Stocks lets you pick a symbol, etc.

While some third-party apps have widgets there aren't many right now, but more will be adding them in the future.

Customize the Lock Screen

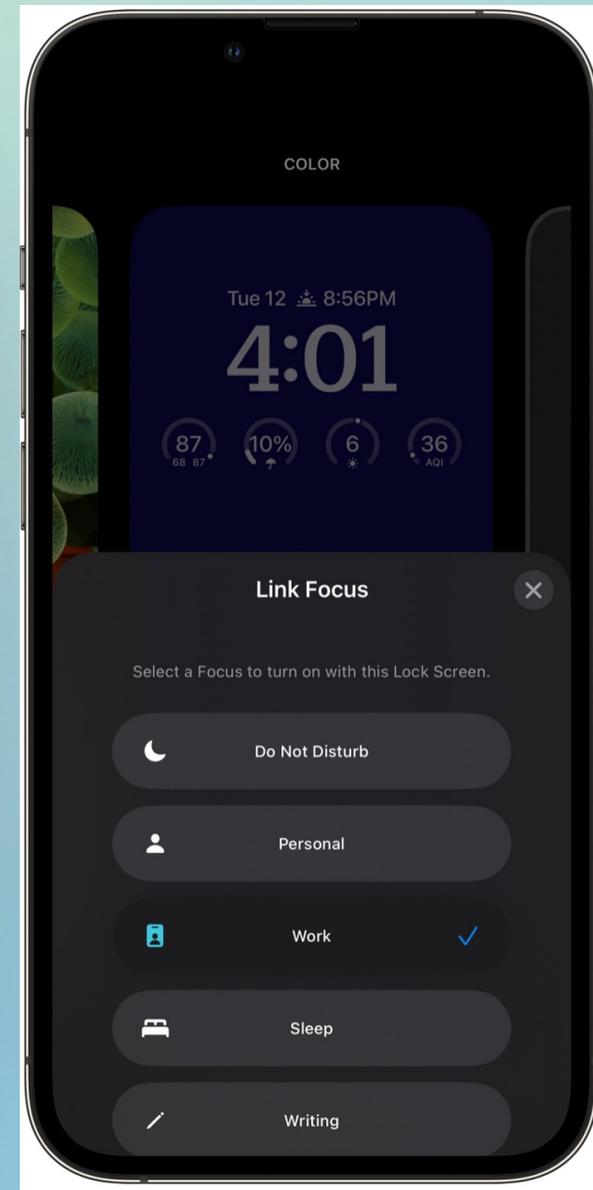

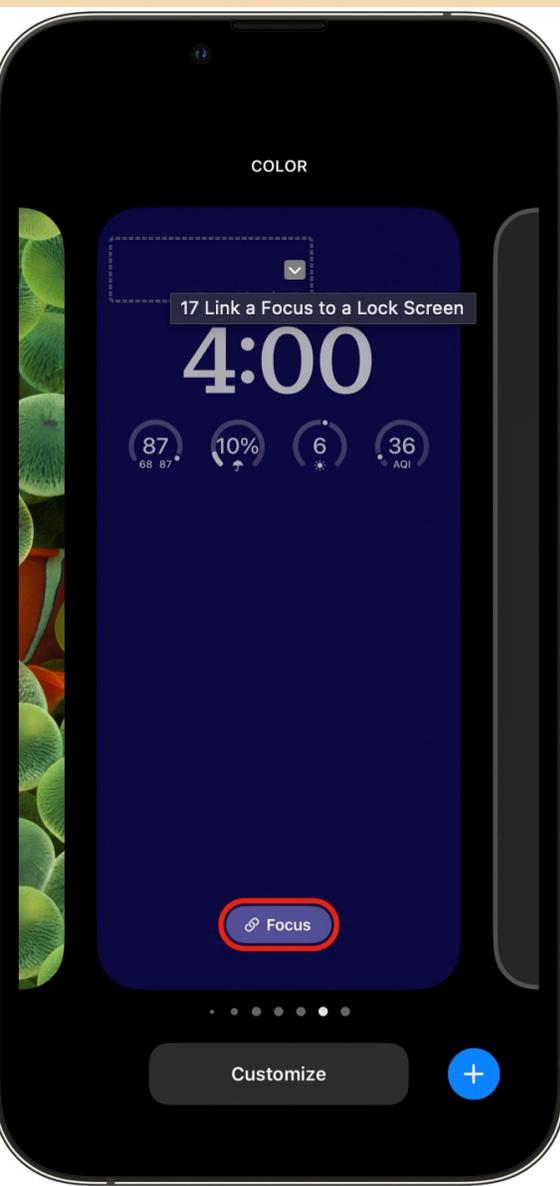

STEP 2

Setting Focus Mode for a specific lock screen

If you already have a Focus you use, you can link it to a specific Lock Screen. You can create different focus modes for different lock screens. If you want you can have a work lock screen and a home lock screen, etc.

To create a Focus, tap and hold on the Lock Screen, scroll left and right to pick one of your custom Lock Screens, and tap **Focus**.

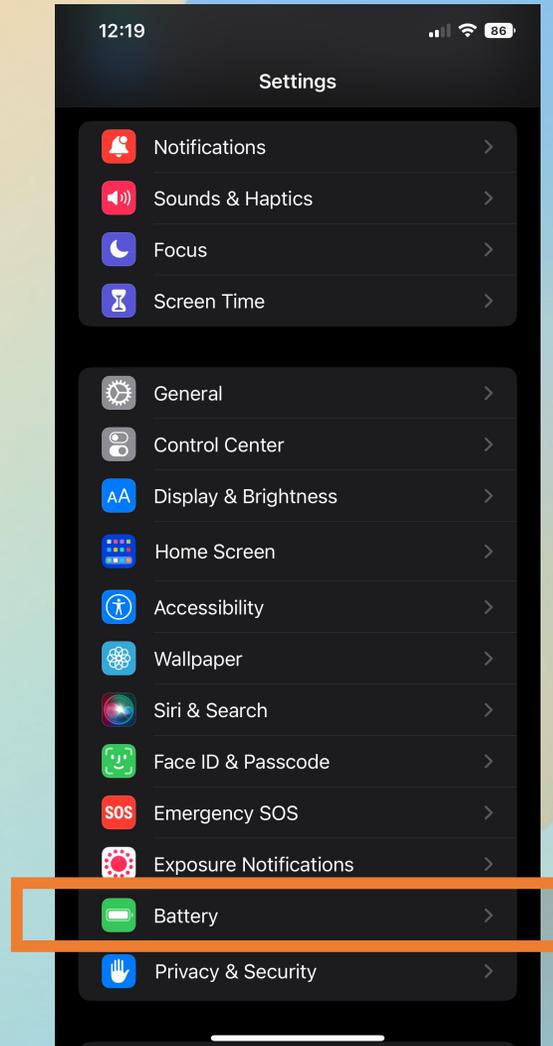

Pick a Focus you want to link to that Lock Screen. When you pick one of Apple's built-in Focus templates (like Work or Personal) and you haven't set it up yet, you'll get a banner asking you to customize the settings.

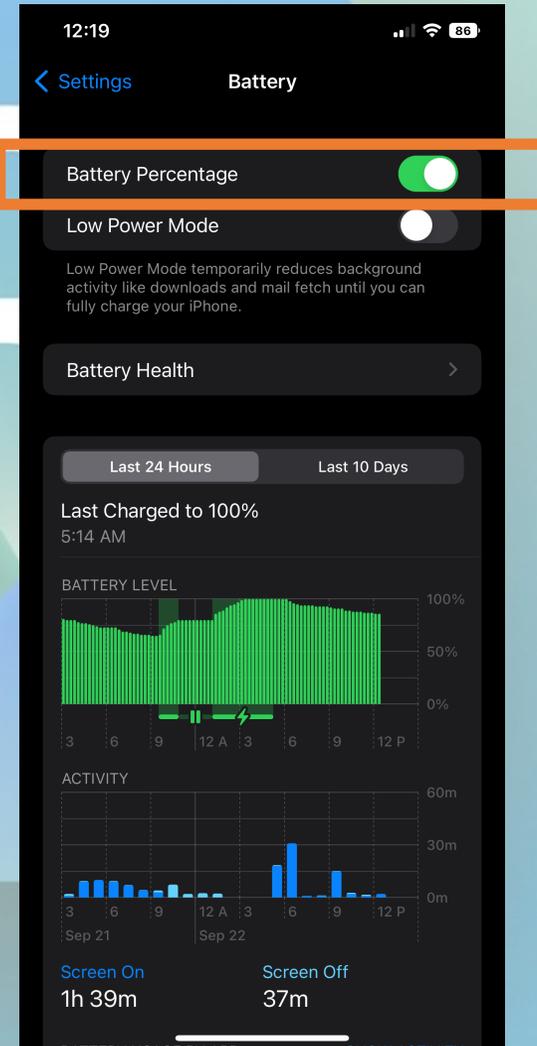

Battery Percentage Number on the iPhone Home Screen

It's very useful to be able to see your phone's battery percentage number right in the status bar, but in 2017 Apple took that away. Now in iOS 16 you can have it back. Here's how to do it:

Go to Settings > Battery

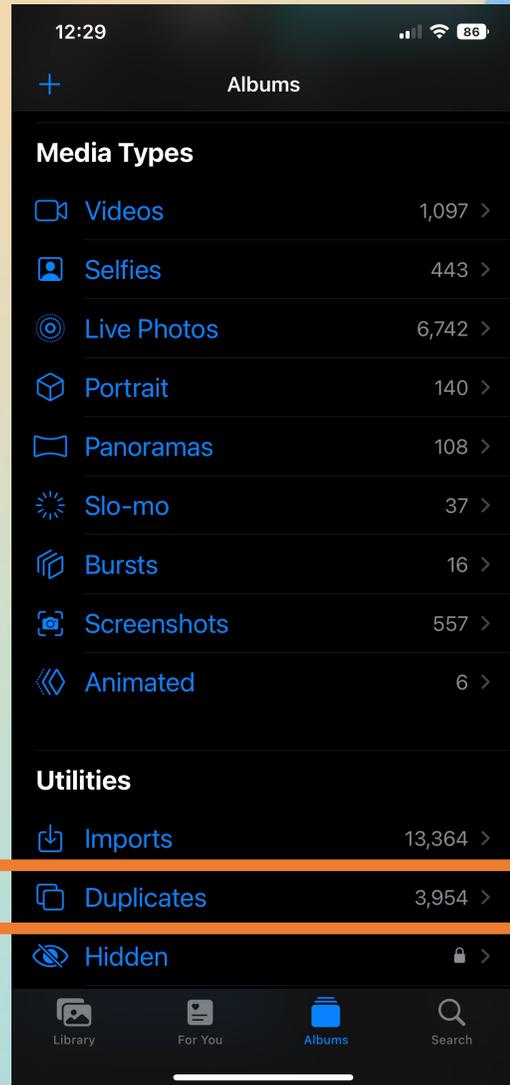

Turn on Battery Percentage

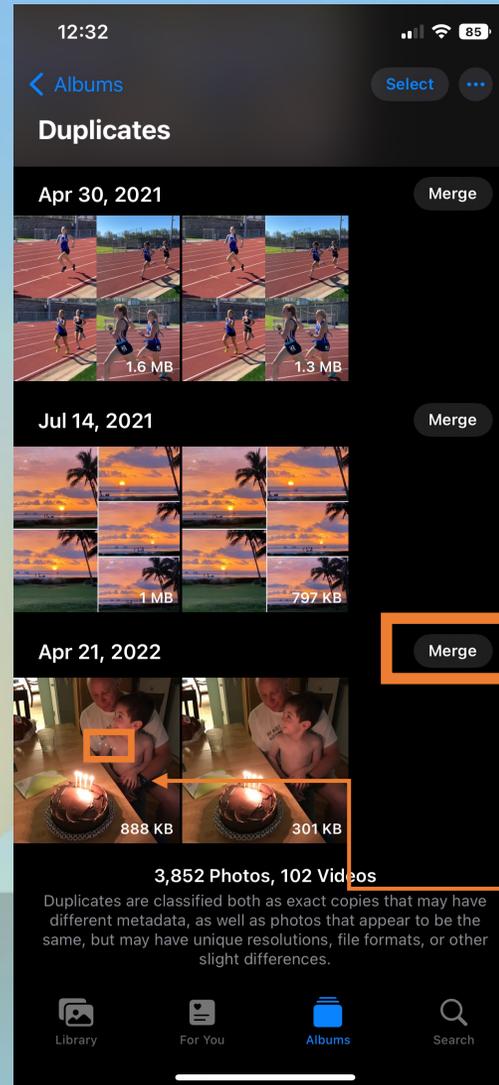

Eliminating Picture Duplicates

iOS 16 has a great feature that automatically detects duplicate photos and videos that will help you declutter your photo library. This feature is on, so you don't have to enable it.

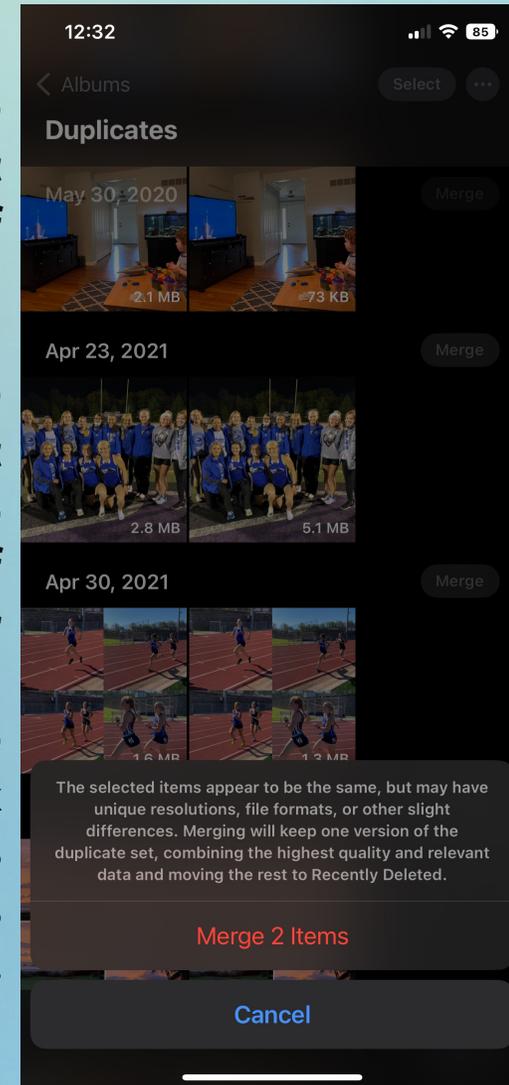

1. Open Photos and go to Albums, Then scroll down and you will see Duplicates

2. Photos will show you each duplicate that it detects and give you the chance to "merge" these into one photo, which will save space and eliminate the extra photos

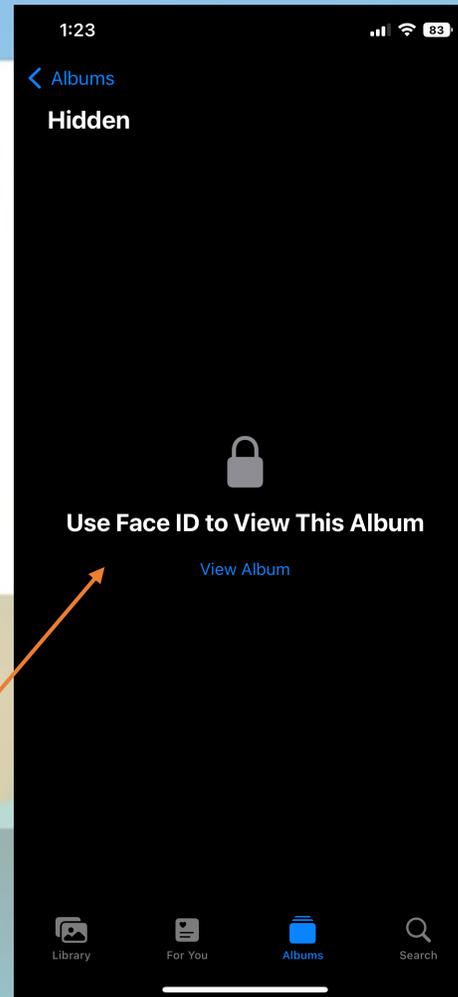

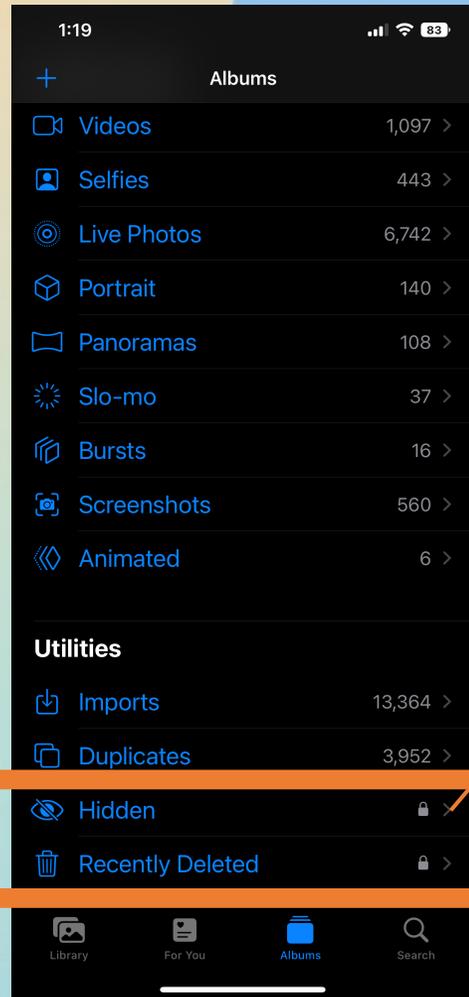

3. Choose "merge" next to each pair of pictures and Photos will keep the highest quality photo and get rid of the other photo. You might want to double check your photos for differences first.

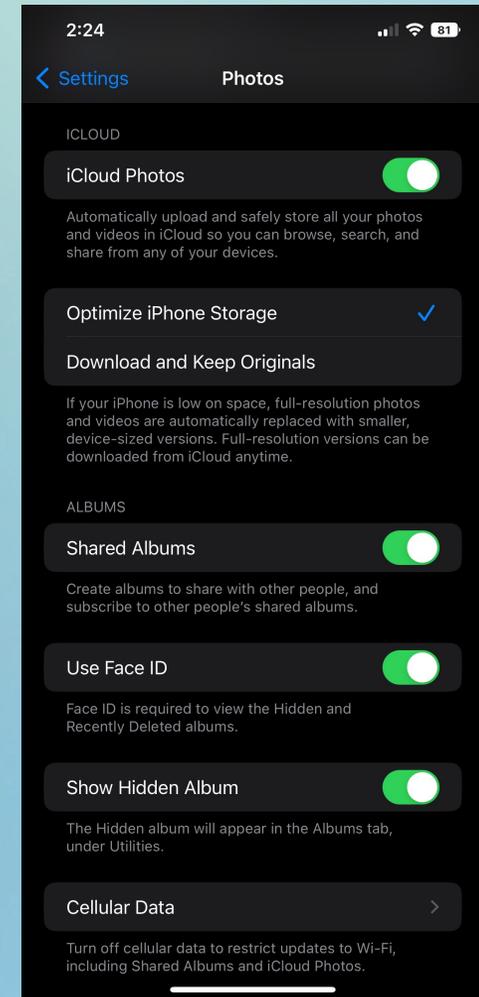

Photos Password Protects Hidden & Deleted Photos

In iOS 16 the Photos app will finally protect your Hidden Photos album and your Recently Deleted photos album. In previous versions of iOS, when you hid a photo, it was simply removed from the main camera roll and put into a separate location, but they weren't password protected. A bunch of third-party apps sprung up to protect photos, but now this is a part of the Photos app.

Open Photos and go to Albums, Then scroll down and you will see Hidden and Recently Deleted. These will be protected by default, and you can open them with Face or Touch ID

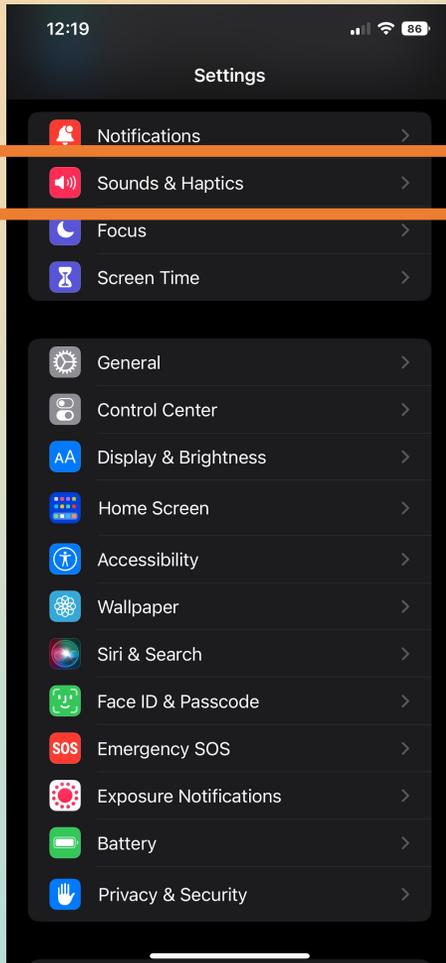

If you want, you can turn this feature off. Go to Settings > Photos and scroll down to Use Face ID. You can also turn off Show Hidden Album.

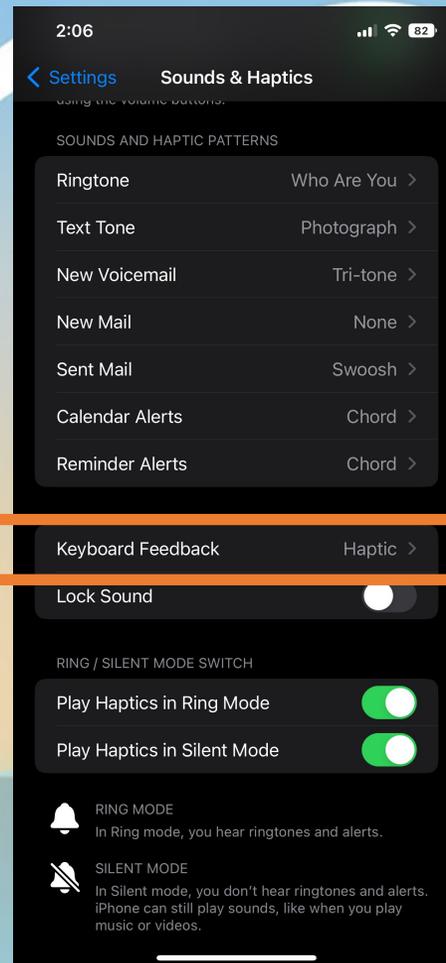

Haptic Touch Keyboard

If you like to “feel” the keyboard when you type, you can turn on haptic keyboard feedback. You will feel a “click” each time you type on the keyboard. You need to have an iPhone 8 or newer for this feature to work. The downside to using this is that it can drain your battery faster.

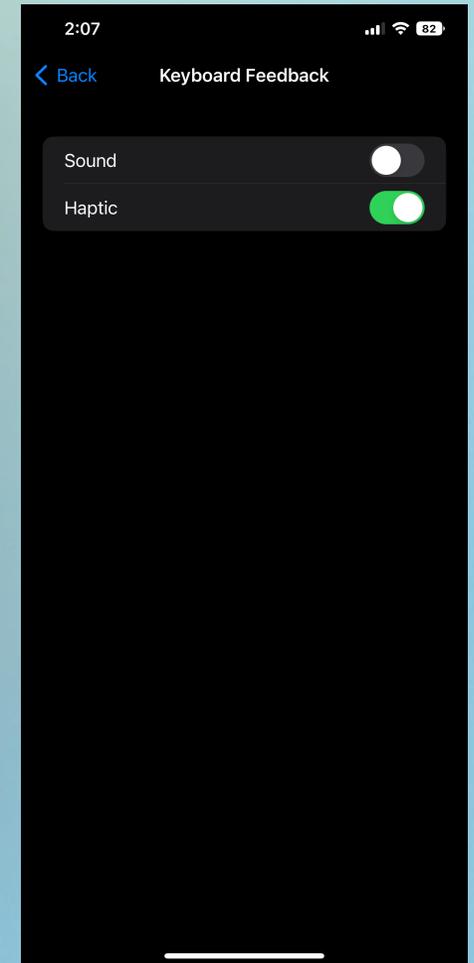

Go to Settings > Sounds & Haptics

Keyboard Feedback-Press “Haptic”

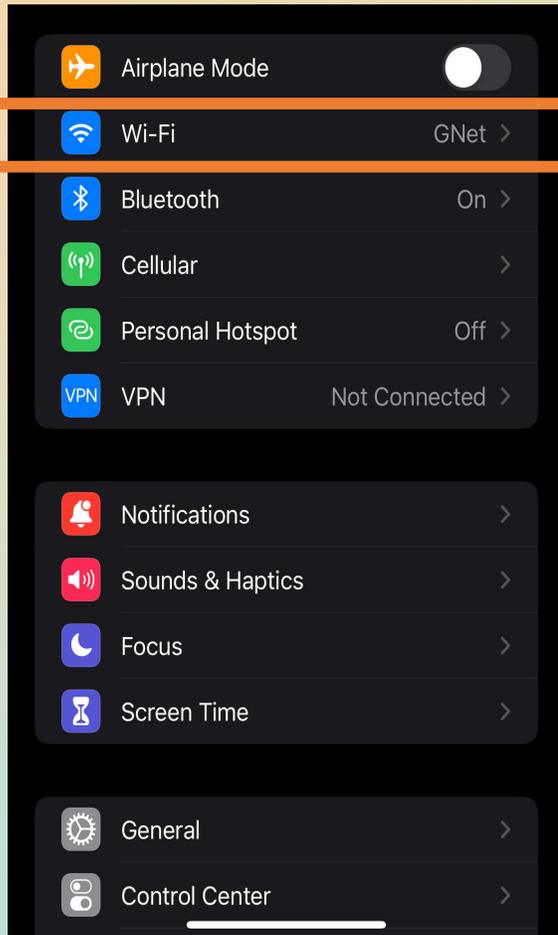

Change Haptic to the on position

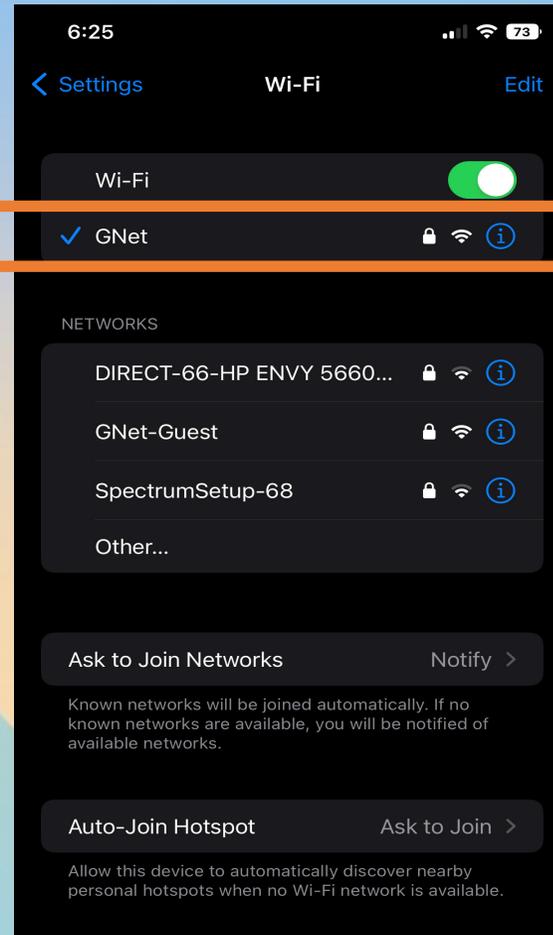

Find and View Your Wi-Fi Password

Can't remember what exactly your Wi-fi password is for a network? No problem. Just follow these steps!

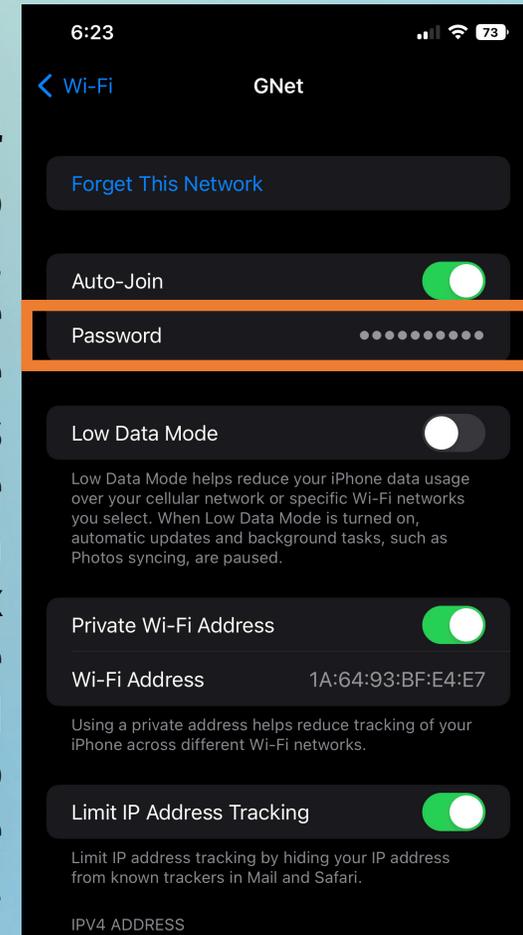

Go to Settings > Wi-Fi

Wi-Fi > Tap the next to the network

Click on Password

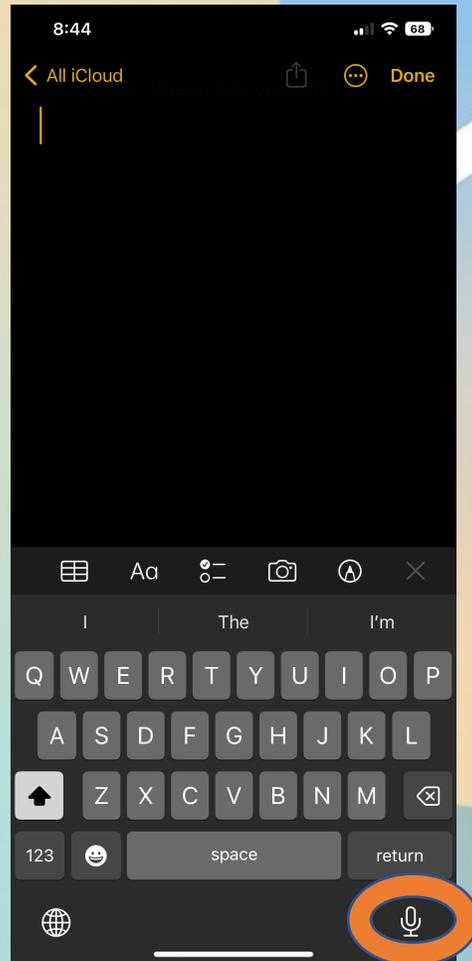

When prompted, use Face ID or your passcode to authenticate. Once authenticated, the Wi-Fi network's password will be viewable in plain text. A pop-up box will appear above the password allowing you to quickly copy the password.

How to Add Emojis to Text with Dictation on iPhone

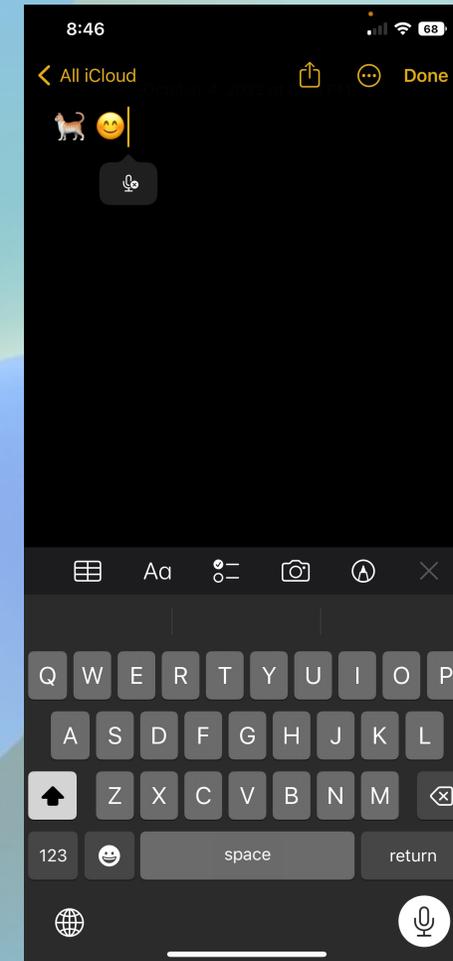

This is only available on iPhones with the A12 chip and later. This includes iPhones XS, XR, and later models.

1. Open any app that allows you to write text, such as Messages.

2. Create a new message and then press on the dictation icon

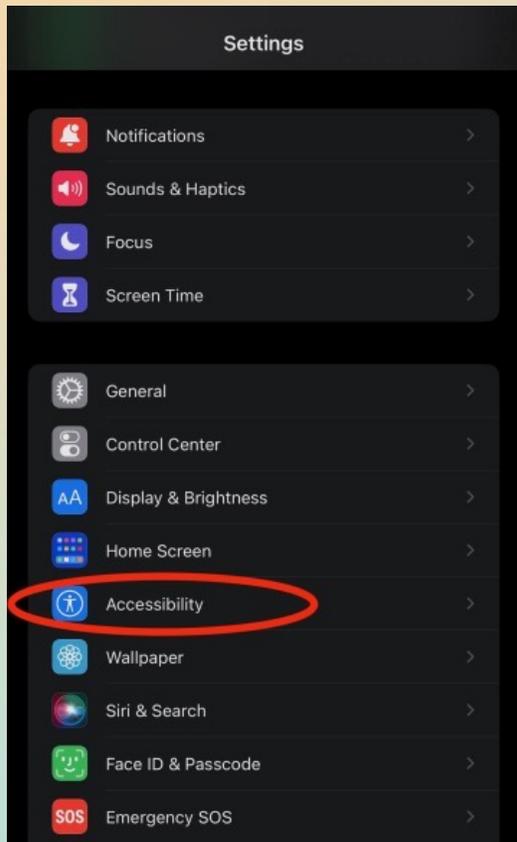

3. After you press the dictation button, then say the emoji you want. For instance, “cat emoji” or “smiley face emoji.” They will then appear. To stop dictating, press the dictation button again or leave the app.

Live Captions in iOS 16

Live Captions, in iOS 16, generate subtitles of any audio playing in any app on your iPhone. This feature is compatible with every iPhone released in 2017 and later, available on the iPhone 11, 12, 13 and 14 models and iPhone SE (2nd & 3rd generation).

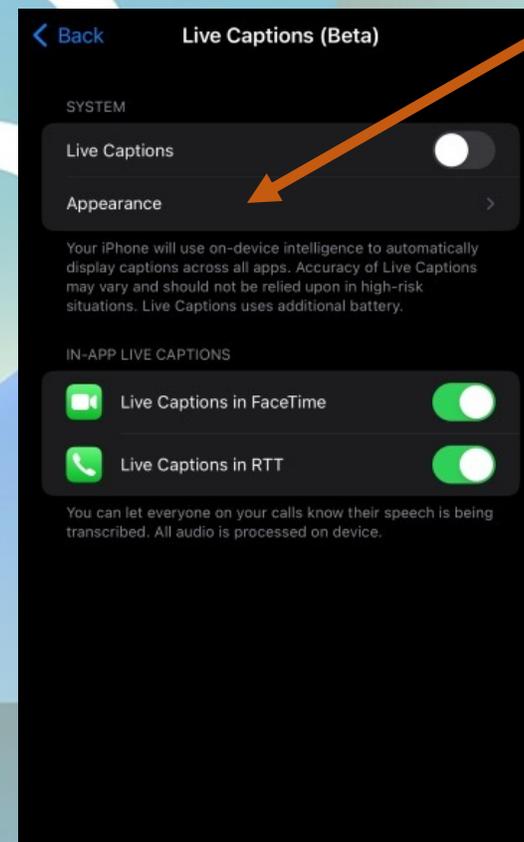

Go to Settings > Accessibility

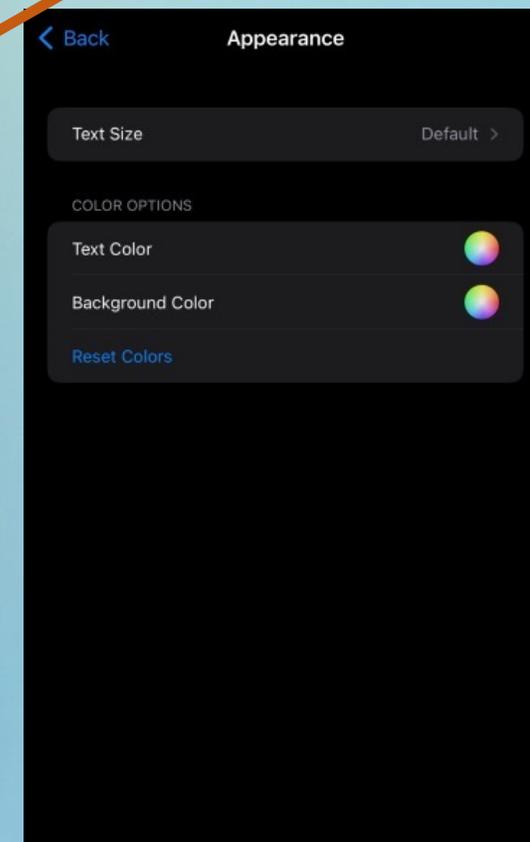

Accessibility > Live Captions

To turn on Live Captions across your entire device, toggle the top button to the "On" position. For calling apps, such as FaceTime, you can manually select which app allows Live Captions. Note that turning these on will alert the people you are speaking with that their audio is being transcribed to text.

Appearance

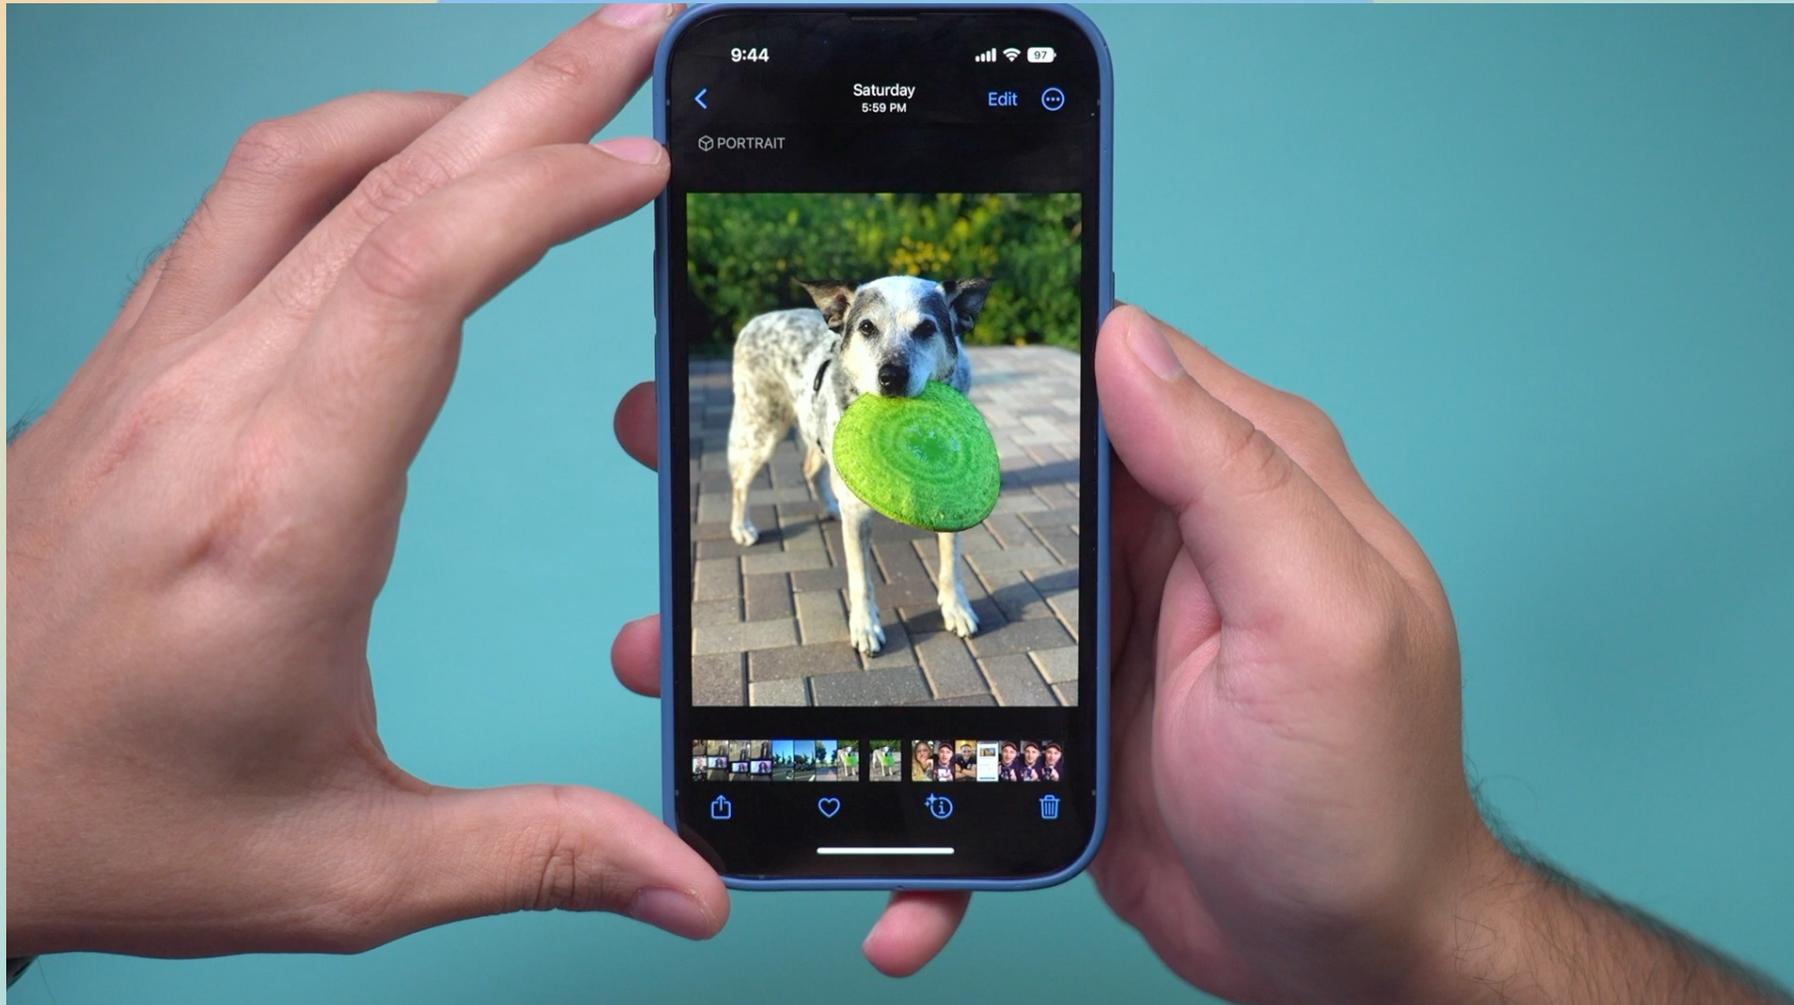

Live Captions in iOS 16

Live Captions, in iOS 16, generate subtitles of any audio playing in any app on your iPhone. This feature is compatible with every iPhone released in 2017 and later, available on the iPhone 11, 12, 13 and 14 models and iPhone SE (2nd & 3rd generation).

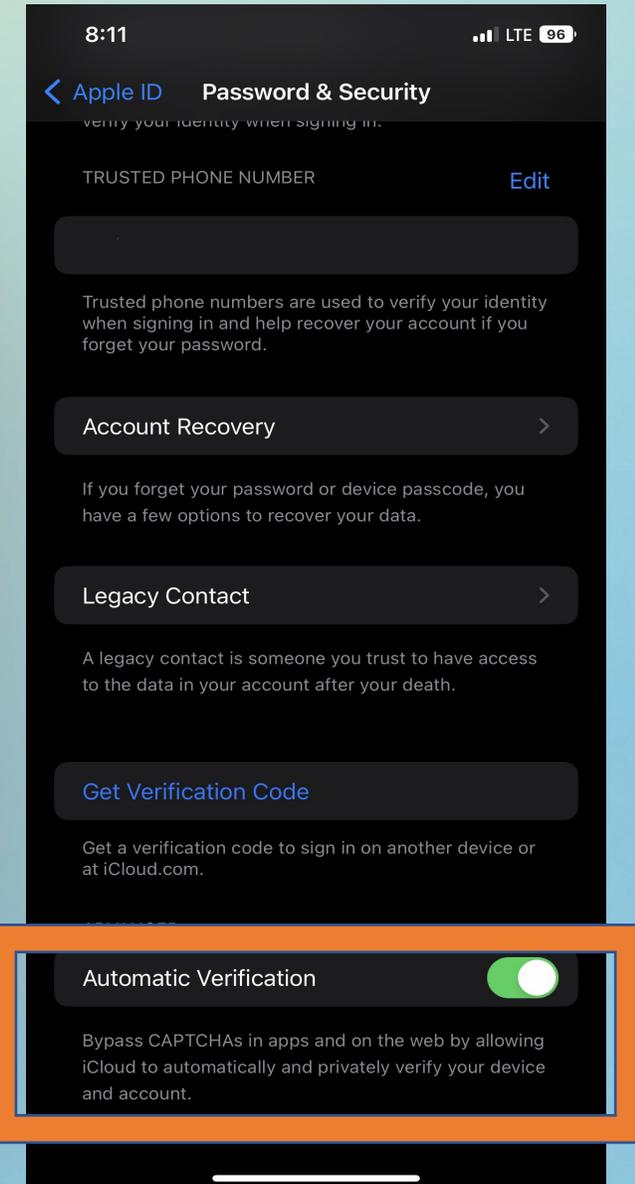

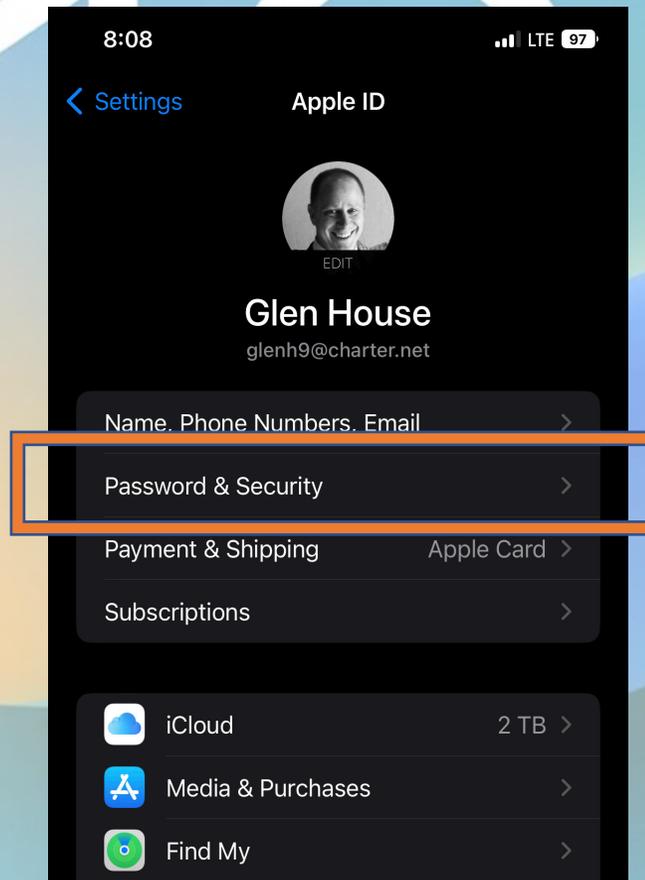

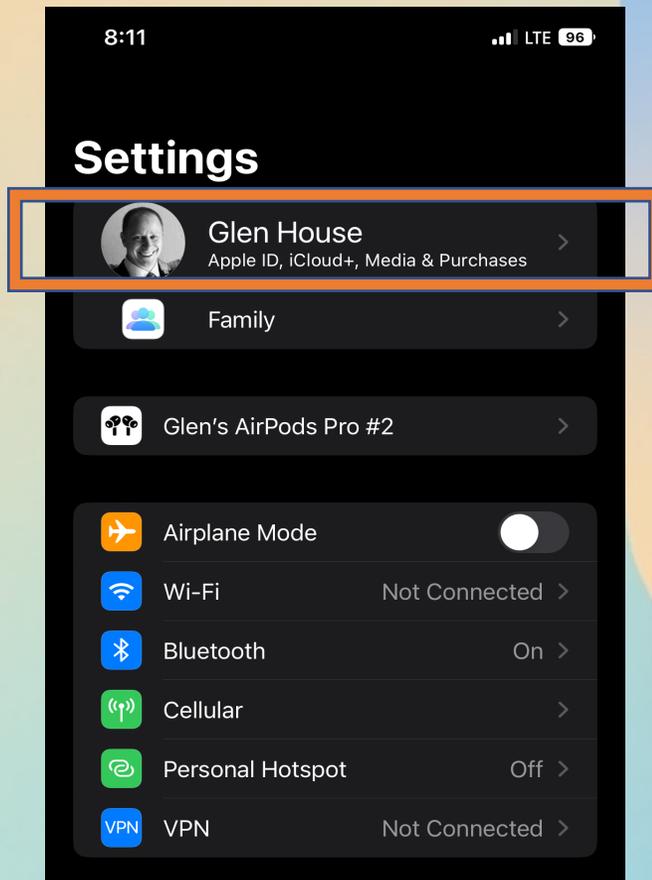

Remove the Background From Images

iPhones that support the photo background removal feature: iPhone X and XR & iPhone SE 2nd-generation and 3rd-generation and later. Here's how to do this:

Avoid CAPTCHAs During Browsing

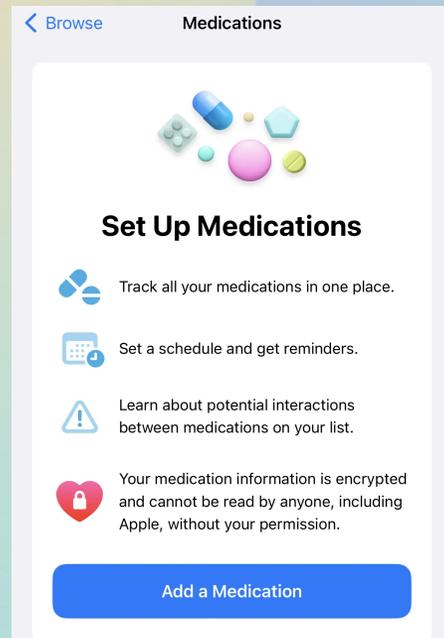

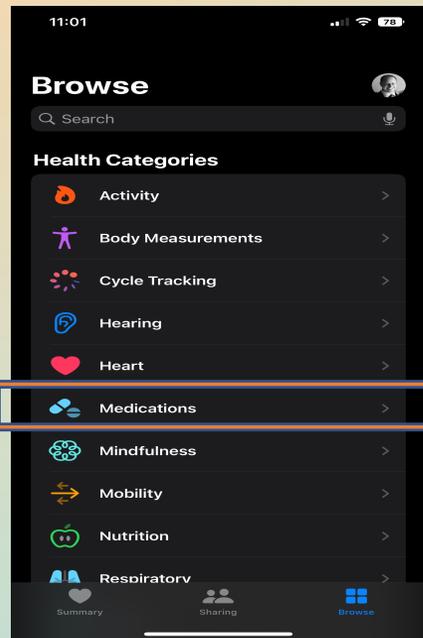

In iOS 16 you can set your system to automatically bypass CAPTCHAs in Safari, as well as other browsers and third-party apps. When you enable this feature, it will verify the user's Apple ID and device to check if they are real and sends a Private Access Token to the app or website. You now don't have to complete puzzles or select images, as it's done automatically. No more proving you're a real human!

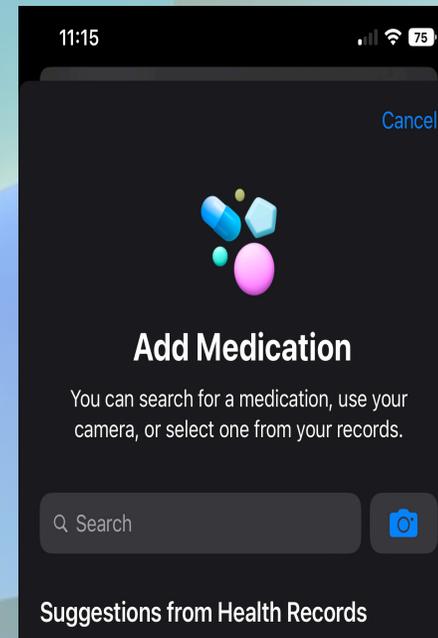

Keep Track of Medications in Apple Health

The Apple Health app now allows you to keep track your medications. This does not work for supplements, only medications. Start the **Health** app and then tap **Browse** at the bottom of the screen.

1. In the **Health Categories** section, tap **Medications**. Then tap **Add a Medication**.

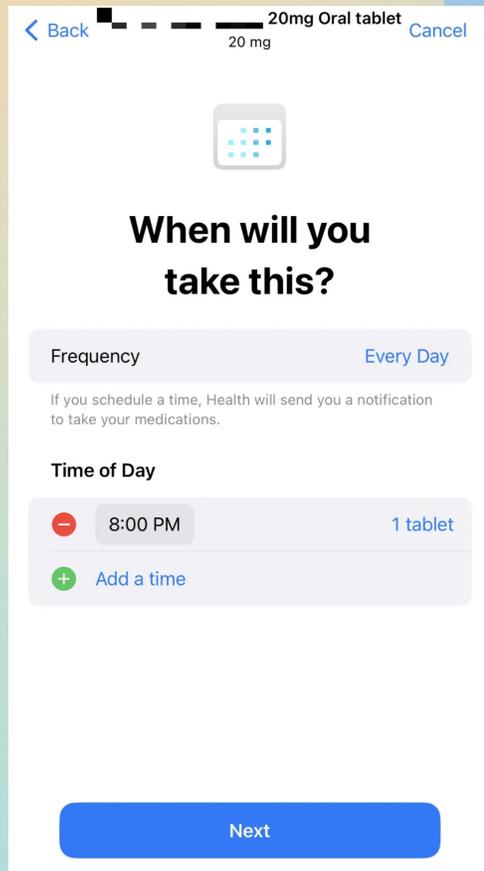

2. On the **Add Medication** page, search for your medication by name or tap the **Camera** icon and scan the label of your medication.

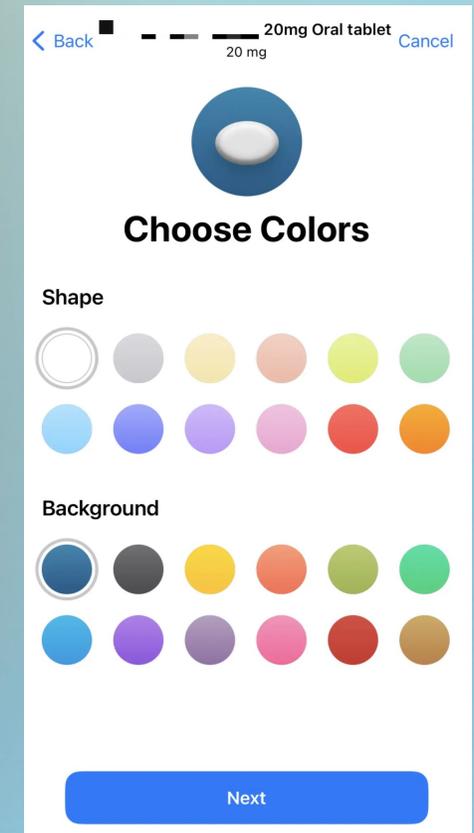

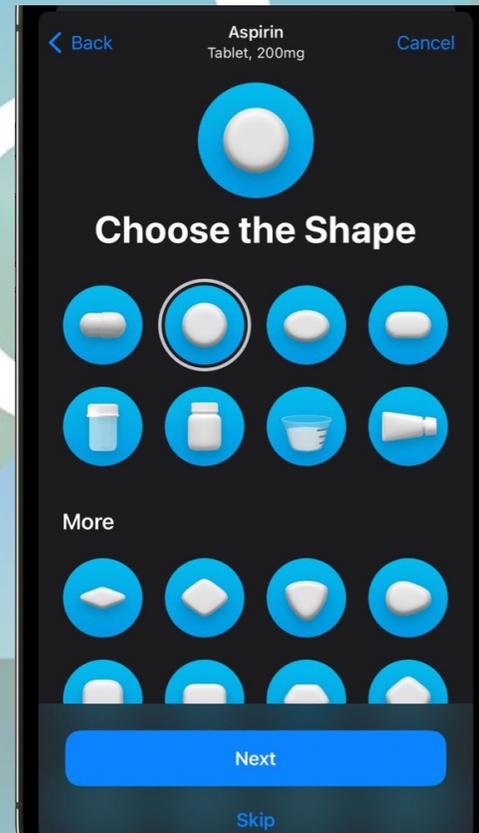

Keep Track of Medications in Apple Health

The Apple Health app now allows you to keep track your medications. This does not work for supplements, only medications. Start the **Health** app and then tap **Browse** at the bottom of the screen.

3. Set the frequency and time of day for your medication.

4. On the **Choose the Shape** page, you can pick the shape of the pill or container and then the color on the **Choose Colors** page.

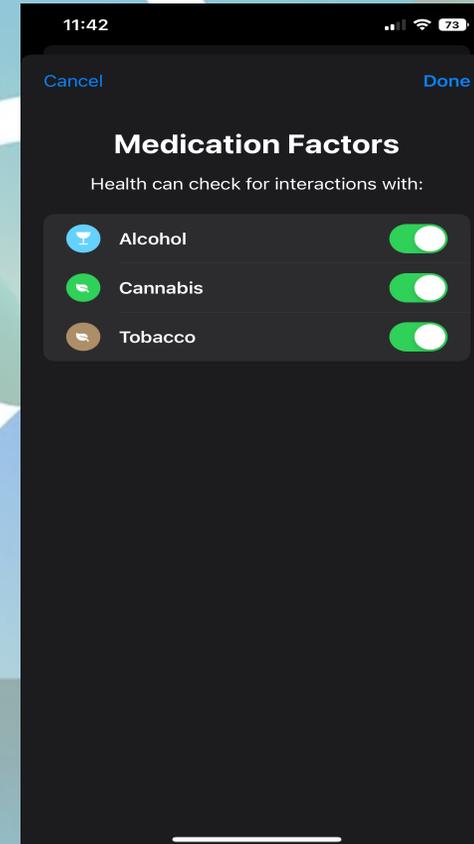

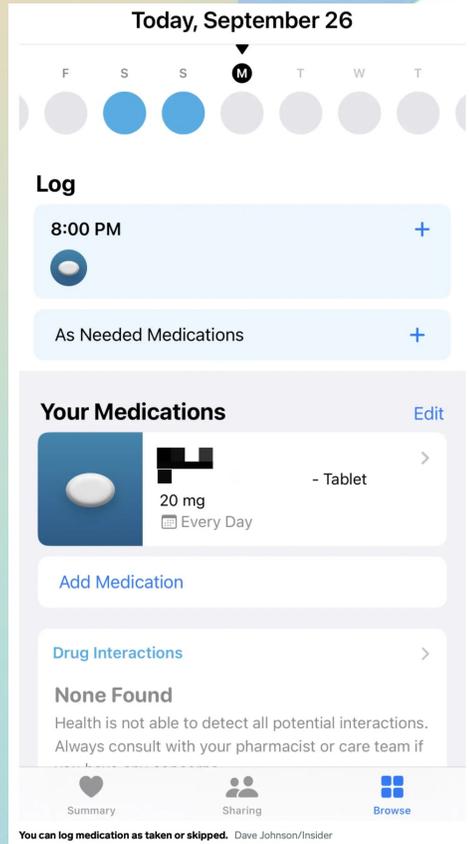

Keep Track of Medications in Apple Health

The Apple Health app now allows you to keep track your medications. This does not work for supplements, only medications.

Start the **Health** app and then tap **Browse** at the bottom of the screen.

5. On the medication summary page, enter any additional details like the display name you want to use or notes about the medicine. Tap **Next** (or **Skip**). On the **Medical Interactions** page, you can indicate if the Health app should warn you about any possible interactions with substances like alcohol, cannabis or tobacco. Turn any of these on by swiping the buttons to the right, then tap **Done**.

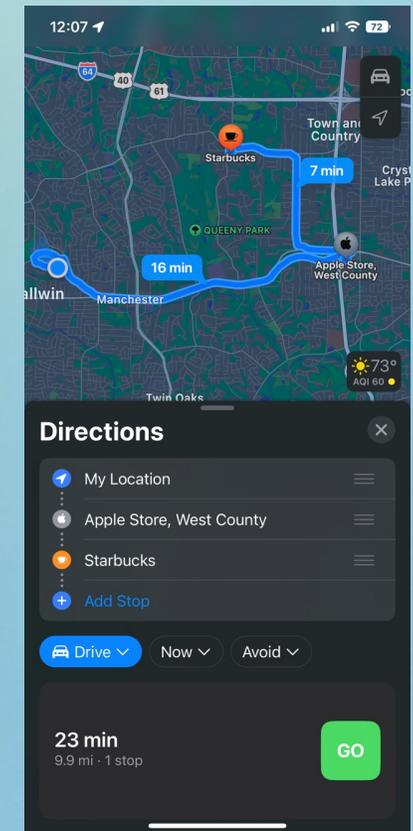

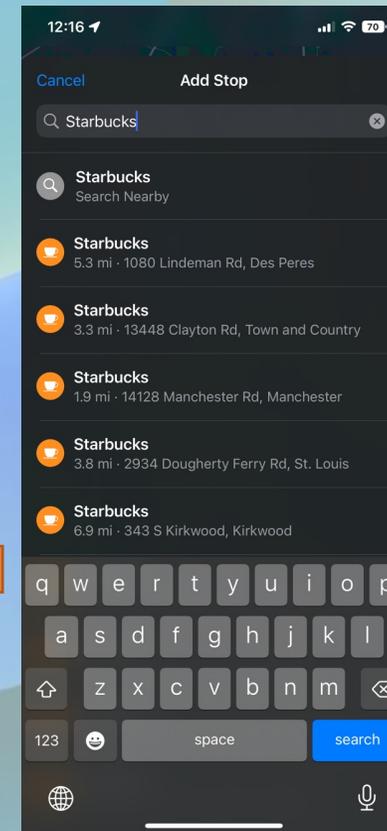

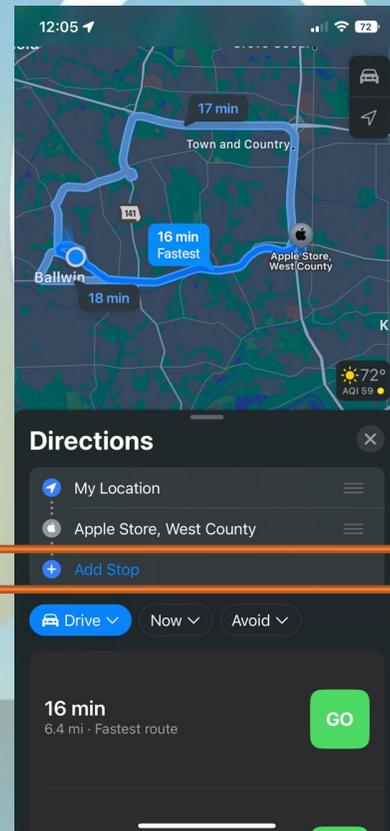

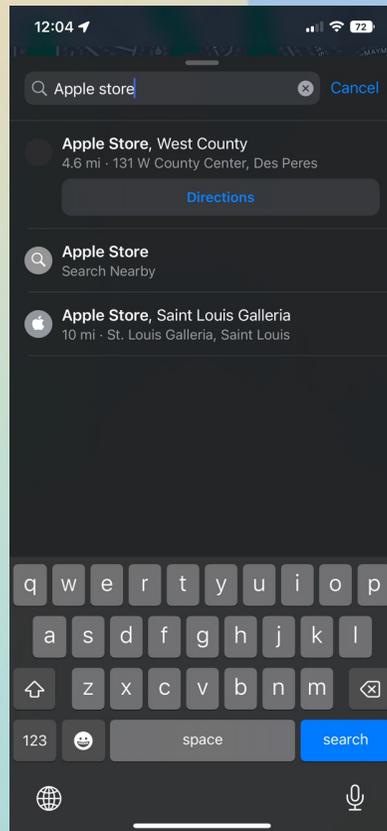

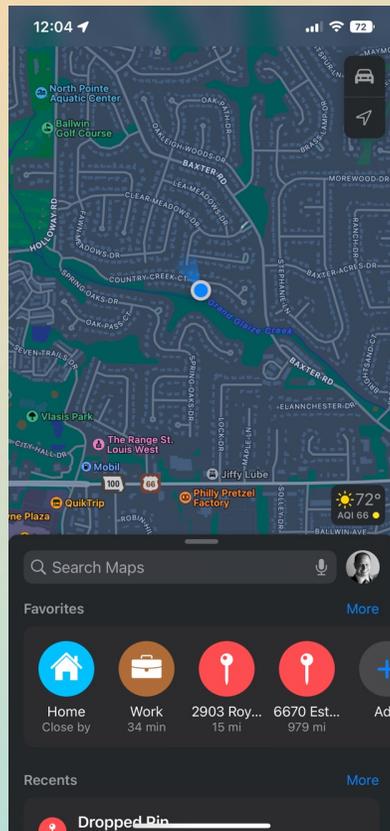

How to Add Multiple Stops to an Apple Maps Route

You can now add multiple stops in an Apple Maps route so you can program everything at once and don't have to program in a new destination every time you get to a destination.

1. Use the Search bar to enter a destination.

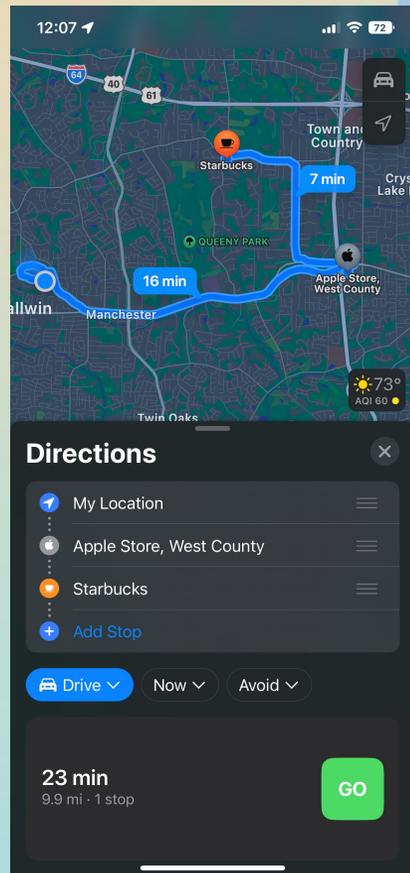

2. To add a stop press and enter a new destination in the search bar.

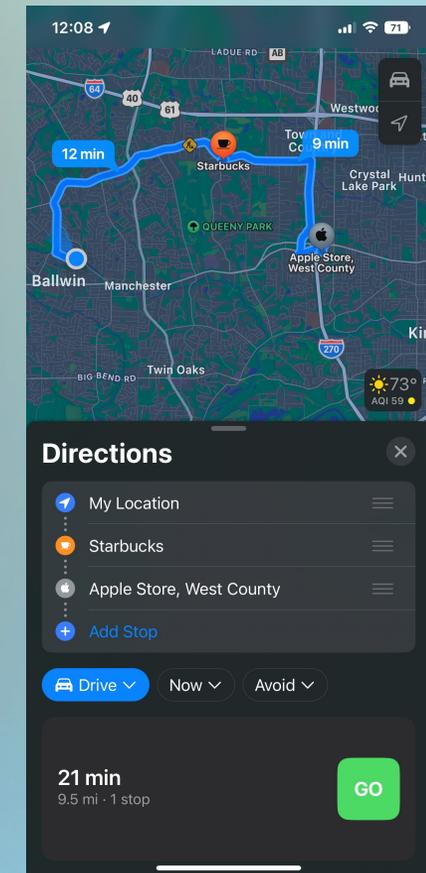

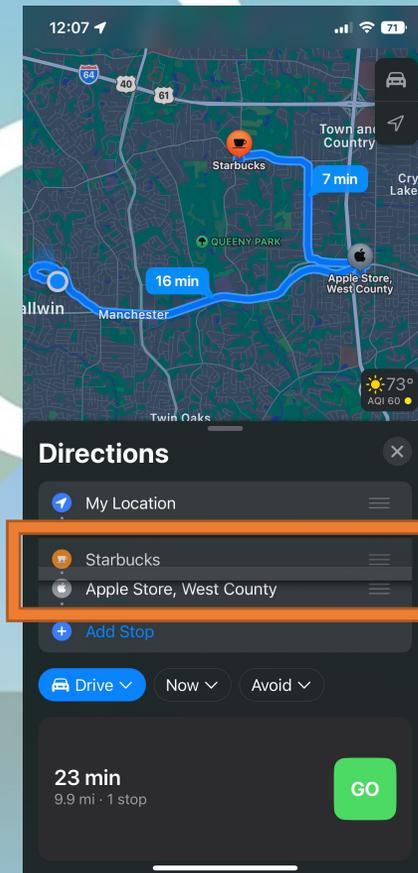

How to Add Multiple Stops to an Apple Maps Route

You can now add multiple stops in an Apple Maps route so you can program everything at once and don't have to program in a new destination every time you get to a destination.

3. You will see that Maps has now created a route with both destinations.

4. You can change the order of the destinations by pressing on a destination and dragging it. Maps will now recalculate the route.

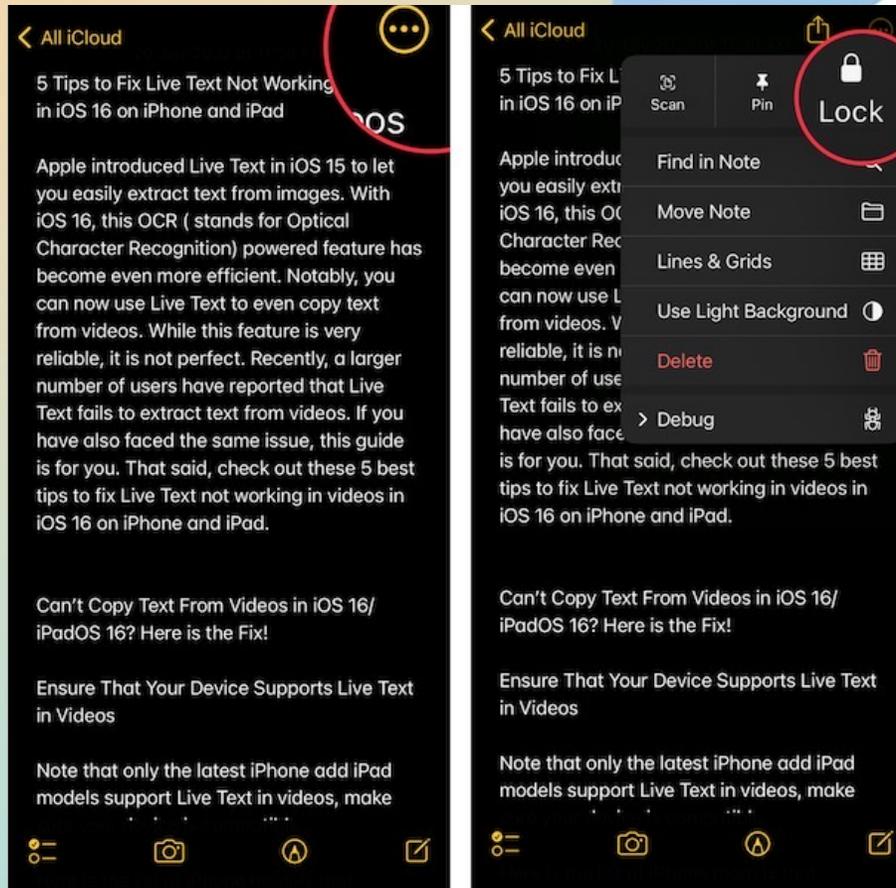

Using Live Text in iOS 16

Live text has been expanded in iOS 16 to include grabbing text in videos. Here are all the things you can do.

Locking Notes

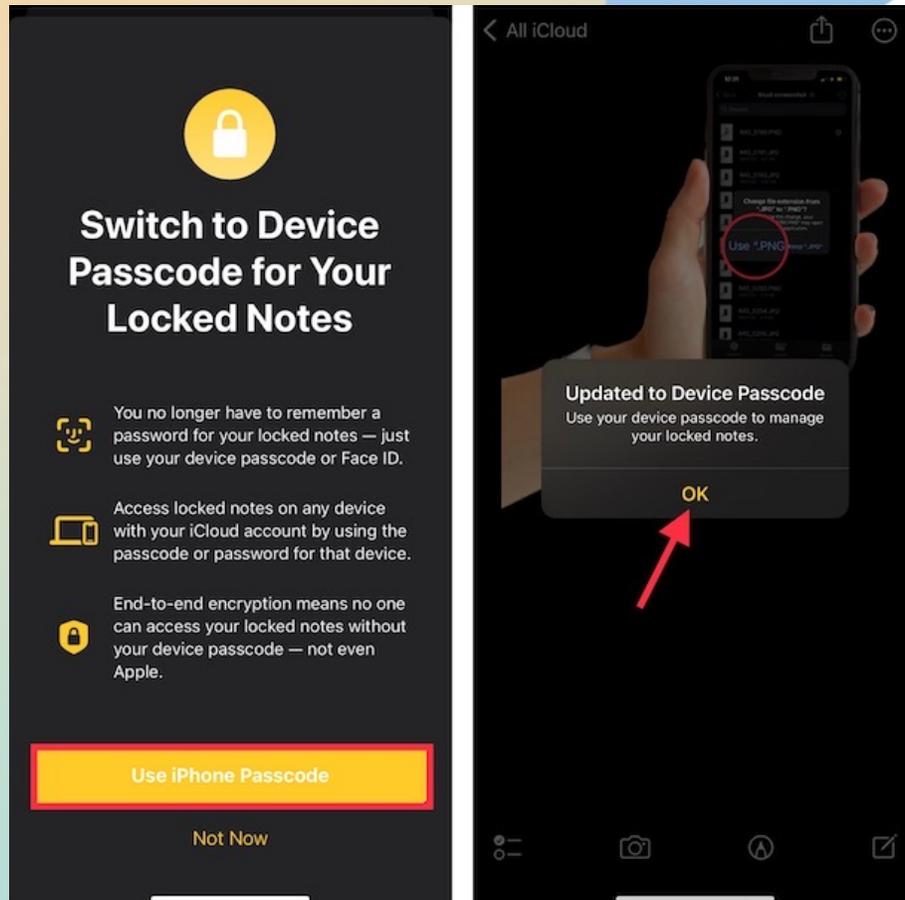

You can now lock specific notes behind Face ID or Touch ID. You must be using iOS 16 or later for this feature to work. In the past you could lock notes a custom password for the note, but people easily forgot their custom passwords or created different ones for different notes, and it became confusing. This has all been simplified in iOS 16. In order to access locked notes on other devices through iCloud you have to be running iPadOS 16, which hasn't been released yet, or MacOS 13.

1. On your iPhone or iPad (iPadOS 16), open the Notes app
2. Now, go to the note that you want to lock.
3. Tap on the **triple dot icon** in the upper-right corner of the screen.
4. Next, select **Lock** in the menu.

Locking Notes

You can now lock specific notes behind Face ID or Touch ID. You must be using iOS 16 or later for this feature to work. In the past you could lock notes a custom password for the note, but people easily forgot their custom passwords or created different ones for different notes, and it became confusing. This has all been simplified in iOS 16. In order to access locked notes on other devices through iCloud you have to be running iPadOS 16, which hasn't been released yet, or MacOS 13.

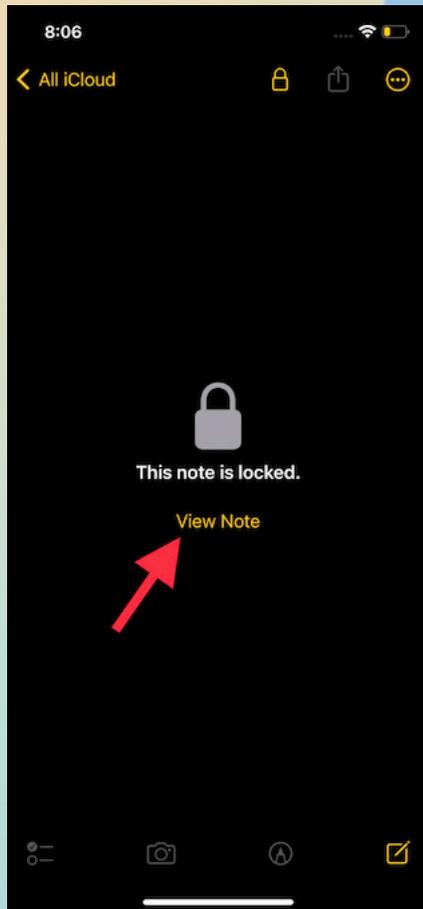

5. On the next screen, read through the benefits of switching to the device passcode for locked notes. Tap on **Use iPhone/iPad Passcode to proceed.**

6. Next up, you will need to authenticate using Face ID/Touch ID.

7. When the authentication is done, you will get a popup message saying something like, *“Updated to Device Passcode. Use your device passcode to manage your locked notes.”* Tap on **OK** in the popup to finish.

Locking Notes

You can now lock specific notes behind Face ID or Touch ID. You must be using iOS 16 or later for this feature to work. In the past you could lock notes a custom password for the note, but people easily forgot their custom passwords or created different ones for different notes, and it became confusing. This has all been simplified in iOS 16. In order to access locked notes on other devices through iCloud you have to be running iPadOS 16, which hasn't been released yet, or MacOS 13.

Unlock Notes with Face ID or Touch ID on iPhone or iPad

Open the **Notes app** on your device and go to your locked note and tap on it. Then tap on **View Note** and authenticate using your Face ID or Touch ID.

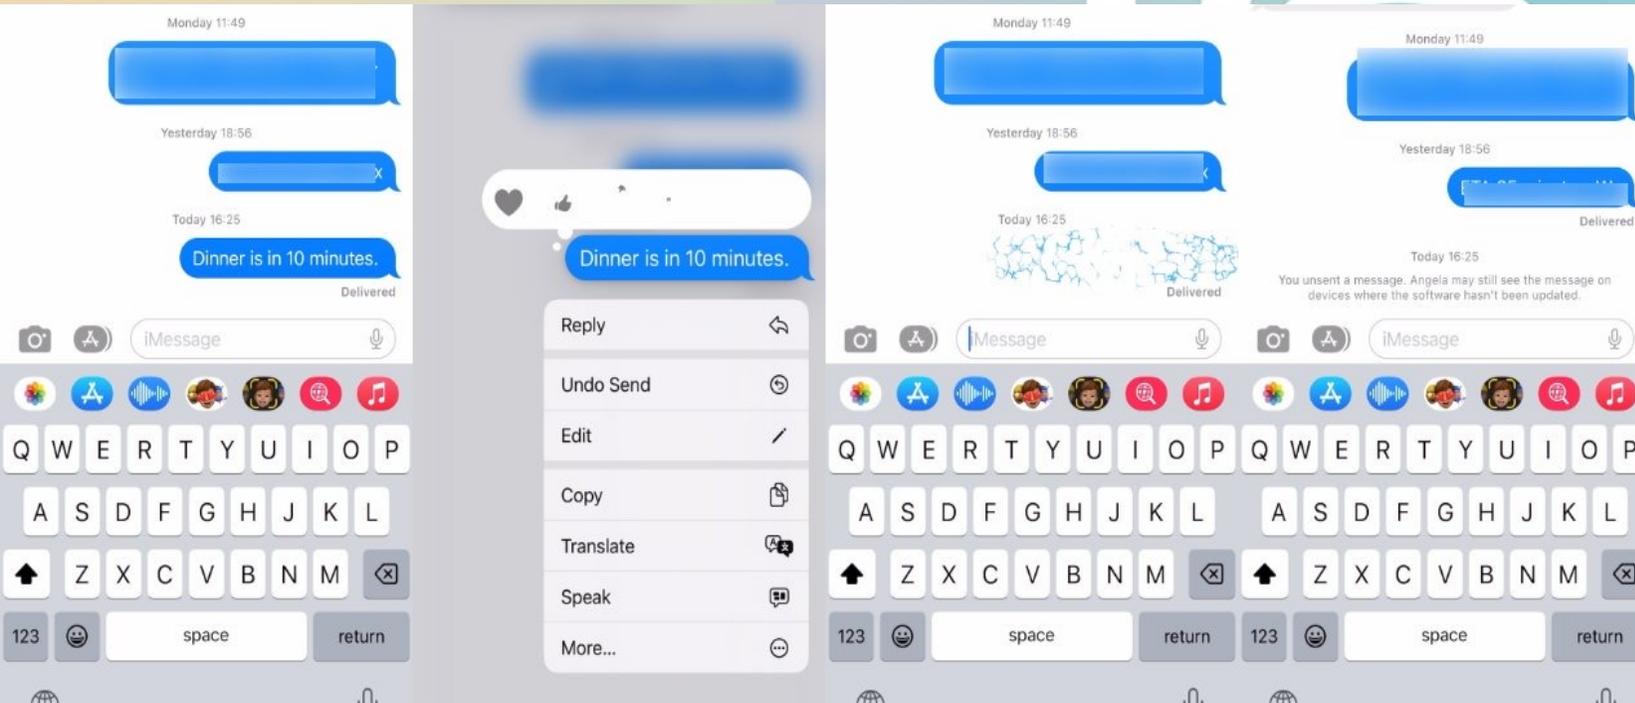

Unsend or Edit Text Messages

You can now unsend iMessages after you've sent them. You only have two minutes to unsend an iMessage and 15 minutes to edit an iMessage. This won't work with SMS text messages-the green bubbles with type. And it only works if the other person you're texting also has iOS 16 installed.

Unsend

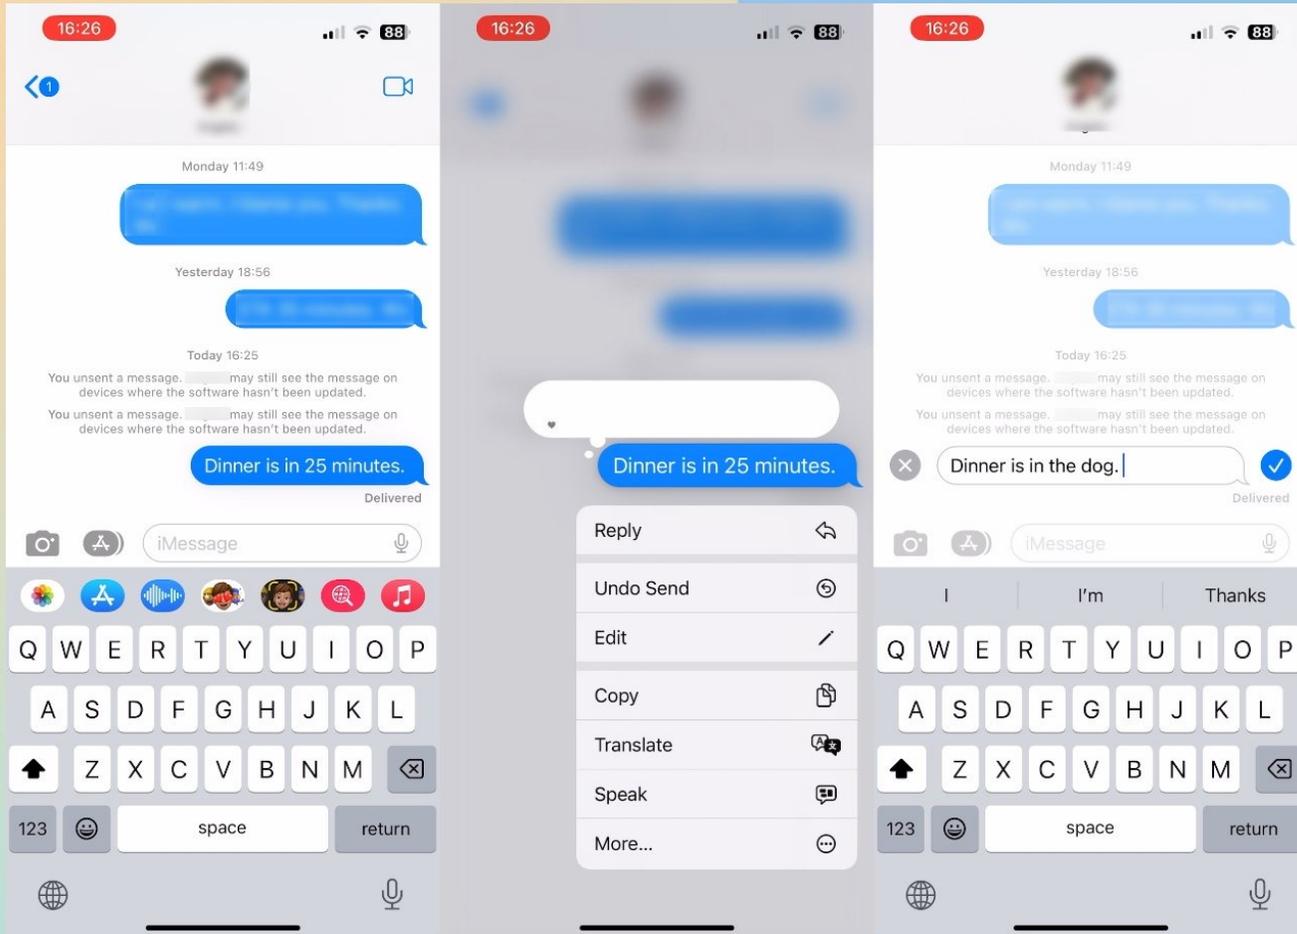

1. Open iMessage.
2. Press and hold the message you want to unsend.
3. A Quick Actions menu will appear.
4. Tap Undo Send.

5. Undo Send works up to two minutes after sending.
6. When you try to unsend iMessages that were sent to someone running iOS 15 or earlier software, they may still be able to see them.
7. If the person you are texting has iOS 16, a message will appear saying you unsend a text message. The person you're texting won't know what that message was, as long as they didn't see a preview of that text when the original iMessage was sent.

Unsend or Edit Text Messages

You can now unsend iMessages after you've sent them. You only have two minutes to unsend an iMessage and 15 minutes to edit an iMessage. This won't work with SMS text messages-the green bubbles with type. And it only works if the other person you're texting also has iOS 16 installed.

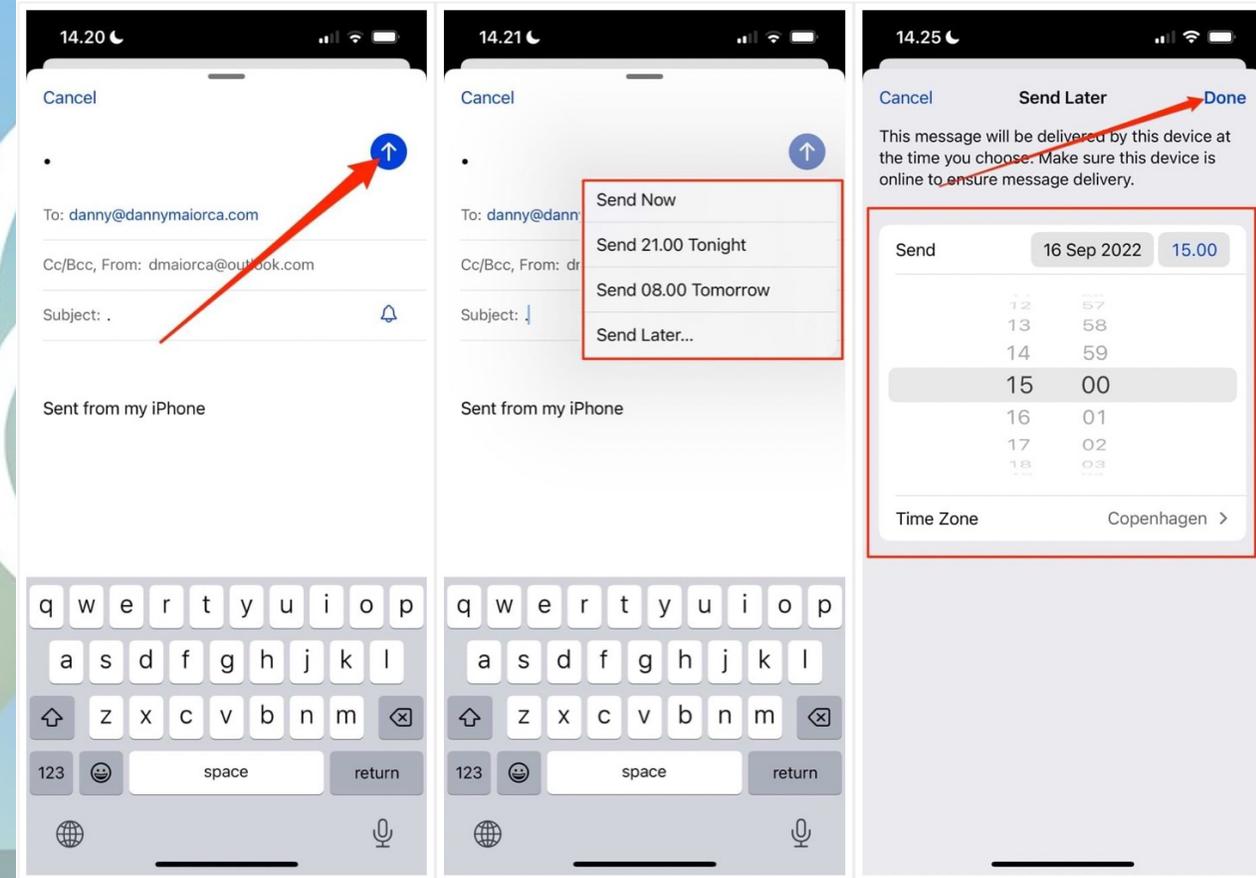

Edit

1. Open iMessage.
2. Press and hold the message you want to edit.
3. A Quick Actions menu will appear.
4. Tap Edit.
5. Choose Edit to change the message.
6. Once you're done editing, hit the blue check mark.
7. You can edit a single message up to five times.
8. You'll have 15 minutes from the time you sent it to change your message.

How to Schedule and Unsend Email

Schedule

1. Go to the **new email icon** in the bottom right-hand corner of your screen.
2. Enter your email recipient and fill in the subject line, along with composing the message you wish to send.
3. Hold onto the **send message icon**; a menu will appear soon after.
4. Choose your preferred sending method. If you pick **Send Later** at the bottom, you can choose exactly when you want the message to go out. Hit **Done** when you're finished.

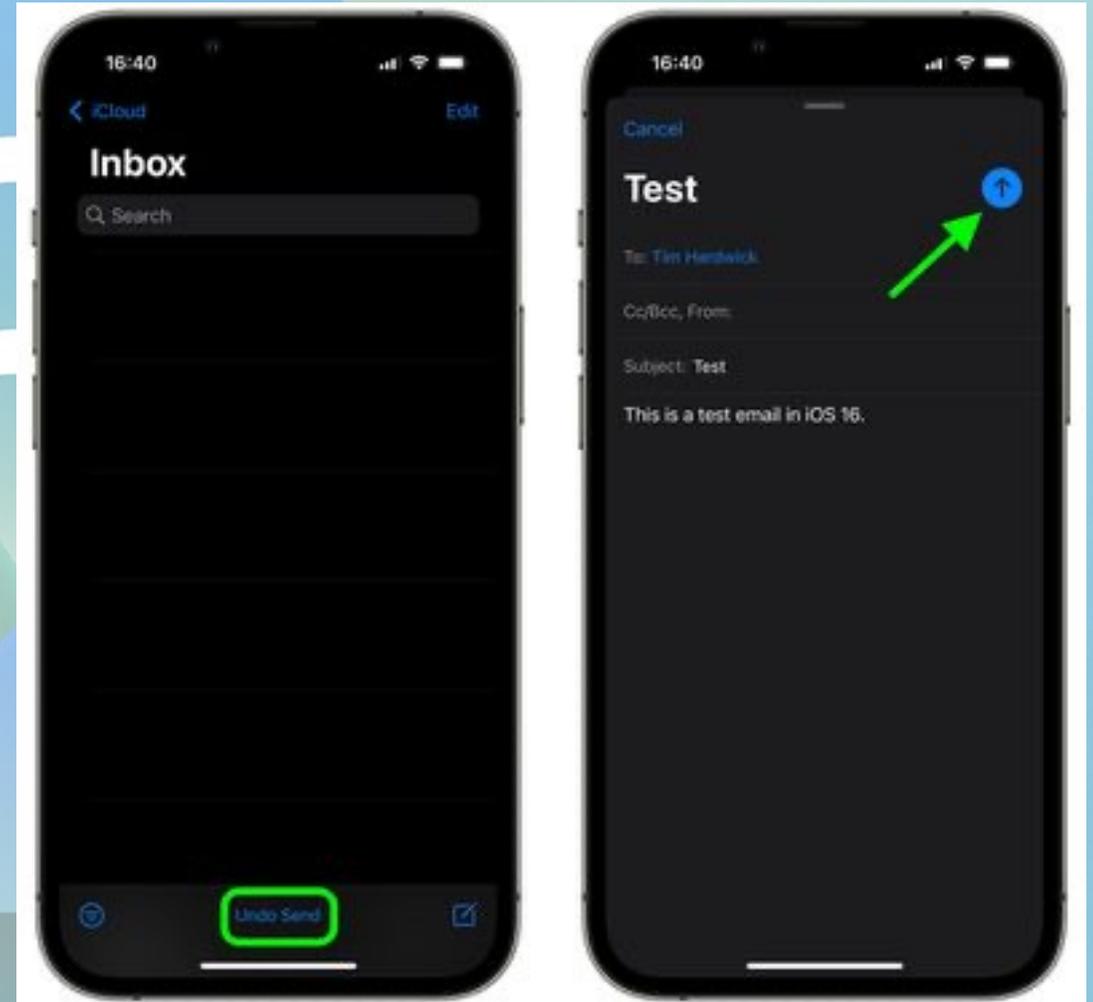

When scheduling emails on iOS 16, note that your device will need to have an internet connection at the time you set.

How to Schedule and Unsend Email

Unsend

1. If you've just sent an email, tap the **Undo Send** option displayed in blue text at the bottom of your inbox. (If you don't see the option, your 10-second time window for unsending the email has elapsed.)
2. You should be taken back to the email compose interface, where you can correct any errors in the original email.
3. Tap the **blue arrow** when you're done to send the email.
